Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 1.0.

AHCARB606	Develop an operational tree management plan
<b>Application</b>	<p>This unit of competency describes the skills and knowledge required to determine, collect and collate information required and to develop and document an operational tree management plan for a specified geographical area.</p> <p>The unit applies to individuals with broad theoretical and technical knowledge of a specific area, or a broad field, of work and learning. They have a broad range of cognitive, technical and communication skills and demonstrate autonomy and judgement for defined area of responsibility, undertaking complex work with broad parameters to provide specialist advice and functions.</p> <p>No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.</p>
<b>Prerequisite Unit</b>	Nil
<b>Unit Sector</b>	Arboriculture (ARB)

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine strategic context	1.1 Determine operational area for management plan 1.2 Define scope and purpose of management plan 1.3 Source workplace policies that impact on management plan 1.4 Specify the geographical area for which the management plan will apply 1.5 Determine historical and cultural values within geographical area of management plan
2. Determine legislative framework	2.1 Determine land use and ownership for of geographic area 2.2 Establish national, state and local government legislative and regulatory constraints for the area
3. Determine stakeholders	3.1 Determine key stakeholders and community group influences in geographic area 3.2 Determine core objectives for trees in geographic area 3.3 Determine current and permissible usage of area
4. Determine tree resources	4.1 Identify, assess and record species, diversity and distribution of trees to be included in management plan 4.2 Identify and perform tree assessments for identified trees 4.3 Define and collect data required for operational management 4.4 Locate and map position of tree planting locations 4.5 Determine tree removal and tree replacement processes 4.6 Determine selection criteria for replacement trees 4.7 Establish a tree inventory for geographic area

AHCARB606 Develop an operational tree management plan

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
5. Determine financial resources	5.1 Identify available financial resources required for implementation of management plan 5.2 Determine management requirements of trees 5.3 Estimate cost of works required for operational program 5.4 Establish a priority of works and a risk mitigation plan 5.5 Determine frequency of pruning cycles 5.6 Determine operational resources required for planned works 5.7 Identify and incorporate existing third party obligations into planned works
6. Develop documentation	6.1 Collate determinations for management plan 6.2 Develop and document operational procedures to achieve management plan objectives 6.3 Document draft operational tree management plan
7. Incorporate feedback and prepare plan	7.1 Prepare draft plan for public consultation 7.2 Notify stakeholders and community groups and obtain feedback 7.3 Review and evaluate feedback 7.4 Amend draft plan and incorporate feedback 7.5 Prepare final version of operational tree management plan

#### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

TITLE	Assessment requirements for AHCARB606 Develop an operational tree management plan
<b>Performance Evidence</b>	
<p>An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.</p> <p>There must be evidence that the individual has developed an operational tree management plan which must include all of the following operational components:</p> <ul style="list-style-type: none"> <li>• tree inspections and assessments</li> <li>• tree selection and planting requirements</li> <li>• tree management</li> <li>• tree maintenance</li> <li>• tree protection</li> <li>• tree removal</li> <li>• risk identification and mitigation</li> <li>• infrastructure protection</li> <li>• habitat protection</li> <li>• power line clearance</li> <li>• community and private trees</li> <li>• pest and disease control</li> <li>• significant trees</li> <li>• trees of a selected geographic area</li> </ul> <p>There must also be evidence that the individual has:</p> <ul style="list-style-type: none"> <li>• determined the strategic context for a specific operational area for management plan</li> <li>• defined scope of operational management plan</li> <li>• sourced policies that impact on the management plan</li> <li>• specified geographical area for the management plan and determined the historical and cultural values within the area</li> <li>• determined land use and ownership of the area</li> <li>• established national, state and local government legislative and regulatory constraints for the management plan</li> <li>• determined key stakeholders and community group influences</li> <li>• determined core objectives for trees in area</li> <li>• determined current and permissible usage of area</li> <li>• identified, assessed and recorded trees to be managed under management which must include:               <ul style="list-style-type: none"> <li>• botanical and vernacular names</li> <li>• diversity of species</li> <li>• distribution</li> </ul> </li> <li>• identified and performed assessments required which must include:               <ul style="list-style-type: none"> <li>• tree health and hazards</li> <li>• site conditions</li> <li>• soil type and condition</li> </ul> </li> <li>• defined and collected data required for operational management</li> <li>• located and mapped position of planting locations</li> <li>• determined tree removal and tree replacement processes</li> <li>• determined selection criteria for replacement trees</li> <li>• established a tree inventory for the geographical area</li> <li>• identified financial resources available for management plan implementation</li> <li>• determined management requirements of trees</li> <li>• determined operational resources, priorities, schedules and estimated cost of works required for operational program</li> <li>• identified existing third party management arrangements and incorporated in plan</li> <li>• collated information for management plan and developed and documented operational procedures</li> <li>• prepared a draft operational tree maintenance plan and circulated to key stakeholders and community groups for feedback</li> <li>• reviewed feedback, amended draft and prepared final operational tree management plan.</li> </ul>	

**Commented [RB1]:** This list was specified in the Range Statement as must do. Please check if All of these are necessary or whether only a set number selected from the list. i.e must include X of the following.

### Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- tree management plans their purpose and structure including:
  - operational areas for formulating a operational tree management plan
  - specifying the objectives, performance targets and intended outcomes for the plan
  - identifying key stakeholders and groups who influence operational tree management plans
  - documenting and preparing draft management plans for feedback
  - preparing documentation and distribution for stakeholder feedback
  - using and assessing stakeholder feedback to finalise final versions
- communications strategies for stakeholder feedback including:
  - print media
  - public submissions
  - public hearing and presentations
- developing and documenting tree management policies and procedures
- impact and considerations of for specific sites and trees and the use and value including:
  - historical and cultural heritage
  - land ownership and use
  - street trees and street tree planting
  - national, state and local government legislation and regulations governing arboriculture management policies including:
    - zoning and planning controls
    - development & planning laws
    - disability discrimination
    - companion animals
- management and maintenance of trees within specific sites including:
  - health, condition and maintenance requirements
  - the need and frequency of pruning cycles
  - tree assessments and maintaining an inventory
  - tree species, type, diversity and distribution
  - soils analysis and growing conditions
  - tree protection for development and construction sites
  - tree pruning operations
  - power line clearance
  - habitat protection
  - pest and disease controls and control strategies relevant to users
- tree removal and replacement strategies including:
  - selection of planting locations
  - criteria for the selection of tree species
  - reasons for tree replacement
  - protecting infrastructure
- working with and managing third party obligations including:
  - contractual arrangements and contractors
  - leasing arrangements
  - licensing obligations
- data collection
- developing and documenting operational procedures and resources including:
  - personnel
  - supplies and materials
  - equipment and machinery
- third party management and maintenance arrangements and obligations affecting management plans including:
  - existing contracts for works or resources
  - leasing arrangements for equipment
  - licensing requirements.

### Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - access to an arboriculture worksite with trees or environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computer with word processing and statistical software
  - internet connection
- specifications:
  - tree inventory
  - operational tree management plan
  - access to federal, state and local government legislation and regulations relevant to trees
  - access to codes of practice and Australian standards relevant to arboricultural activities

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.
