## **Modification history**

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical
	Training Package Version 5.0.

FBPDPR3XX3	Operate and monitor a fermentation process	
Application	This unit of competency describes the knowledge and skills required to set up, operate, adjust and shut down a fermentation process typically used in the production of dairy products.	
	This unit applies to individuals who apply basic operating principles to the operation and monitoring of machines and equipment used for the fermentation of dairy products in a dairy processing environment.	
	All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety codes, regulations and legislation that apply to the workplace.	
	No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.	
Prerequisite Unit	Nil	
Unit Sector	Dairy processing (DPR)	

Elements	Performance Criteria	
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
1. Prepare the fermentation equipment and process for operation	<ul> <li>1.1 Confirm materials and personal protective equipment are available</li> <li>1.2 Identify and confirm cleaning and maintenance requirements according to food safety requirements</li> </ul>	
	<ul> <li>1.3 Identify food safety requirements for the task and product</li> <li>1.4 Fit personal protective equipment and adjust machine components and attachments needed for operating requirements</li> <li>1.5 Enter parameters required to meet safety and operating requirements</li> </ul>	
2. Operate and monitor equipment	<ul> <li>1.6 Conduct pre-start checks according to workplace procedures</li> <li>2.1 Start up the fermentation process according to workplace procedures</li> <li>2.2 Monitor equipment to identify variation in operating conditions</li> <li>2.3 Adjust equipment operations to meet product specification</li> <li>2.4 Take samples and confirm that fermentation meets specification</li> <li>2.5 Identify, rectify and report out-of-specification product or process</li> <li>outcomes</li> <li>2.6 Maintain the work area according to workplace guidelines, workplace health and safety and food safety requirements</li> <li>2.7 Enter information in workplace records in required format</li> </ul>	
3. Shut down the fermentation process	<ul><li>3.1 Identify the appropriate shutdown procedure</li><li>3.2 Shut down the process according to workplace procedures</li><li>3.3 Identify and report maintenance requirements</li></ul>	

Foundation Skills		
	ose language, literacy, numeracy and employment skills that are essential for for for the second second second f	
Skill	Description	
Reading	Interpret standard operating procedures for the fermentation process	
Writing	Record processing data using electronic, digital and/or paper-based formats	
Numeracy	Confirm process remains within specifications for time and temperature (°C), water activity (Aw)

TITLE	Assessment requirements for FBPDPR3XX3 Operate and monitor a fermentation process
Performance Evidence	

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has operated a fermentation process to produce at least one batch of fermented food to meet product specification, including:

- applying food safety procedures to work practices
- following safe work practices
- taking corrective action in response to typical faults and inconsistencies.

## Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the fermentation process, including the stages and reactions that occur during fermentation
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available
- the flow of this process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the fermentation process
- types of starters used and their role in the fermentation process
- quality requirements of materials and effect of variation on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters
- typical equipment faults and related causes, including:
  - signs and symptoms of faulty equipment
  - early warning signs of potential problems
- methods used to monitor the fermentation process, including inspecting, measuring and testing as required by the process
- good manufacturing practices (GMP) relevant to work task
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/cross contamination and food safety risks associated with the process and related control measures
- common causes of variation and corrective action required
- health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- requirements of different shutdowns as appropriate to the process and workplace production requirements, including:
  - emergency and routine shutdowns

•

- procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste or rework collection and handling procedures
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- routine maintenance procedures for fermentation equipment
- cleaning procedures for fermentation equipment
- procedures to record traceability of product.

## **Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective clothing and equipment
  - fermentation equipment
  - product to be fermented
  - cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, food safety and quality requirements
  - information on equipment capacity and operating parameters
  - product specifications, control points and processing parameters
  - sampling schedules
  - documentation and recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
