2	September 2016	Skills Impact	Content updates to accompany release of <i>AHC Agriculture, Horticulture and Conservation and Land Management Training Package V1.1</i> . Mapping and typographical errors corrected.
1	June 2016	Skills Impact	Implementation Guide created to accompany release of <i>AHC Agriculture, Horticulture and Conservation and Land Management Training Package V1.0</i> .

Introduction

About this Guide

This Companion Volume Implementation Guide (Implementation Guide) is designed to assist assessors, trainers, Registered Training Organisations (RTOs) and enterprises to use the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package*.

Structure of this Guide

This Implementation Guide for the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* consists of two parts. Each part can be downloaded from VETNet at: <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

This document is **Part 1** and it contains two sections.

1. Overview

This section includes information about:

- what training packages are, and how they are developed
- the qualifications, skill sets and units of competency (including imported and prerequisite units of competency) in the training package
- mapping between previous and current versions of the qualifications and units of competency
- key work, training and regulatory/licensing requirements in the industry.

2. Implementation

This section explains some of the key features of the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* and the industry that will impact on the use of the Training Package. It includes information about:

- training pathways
- occupational outcomes of qualifications
- entry requirements for qualifications
- legislative requirements
- resources and equipment requirements.

Note about Part 2

Please refer to the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package Implementation Guide Release 13 Part 2: Component Details* file for:

- lists of qualifications, skill sets and units of competency in the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package V9.0*
- units of competency from the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package 9.0* with prerequisite requirements
- units of competency imported from other training packages included in qualifications in the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package V9.0*
- mapping information, providing a summary of the key changes between current and previous versions of the training package components (qualifications, skill sets and units of competency).

Overview

About training packages

Training packages specify the skills and knowledge (known as competencies) that individuals need in order to perform effectively in workplaces. Training packages:

- reflect identified workplace outcomes
- support national (and international) portability of skills and competencies
- reflect the core, job-specific and transferable skills, required for job roles
- enable the awarding of nationally recognised qualifications
- facilitate recognition of peoples' skills and knowledge, and support movement between school, VET and higher education sectors
- promote flexible modes of training to suit individual and industry requirements.

Note: To make them easy to interpret, training packages are written in simple, concise language, with delivery and assessment requirements clearly described. Training package products do not prescribe how an individual should be trained so that users can develop training and assessment strategies to suit the needs of their particular learners.

Training package products

Training packages consist of endorsed and non-endorsed components¹.

Although all components must be developed to comply with the *Standards for Training Packages 2012*², endorsed components must be submitted for approval by the Australian Industry and Skills Committee before they are released for use.

A summary of endorsed and non-endorsed components is provided on the following page.

¹ Note that the words 'components' and 'products' are used in currently applicable legislation standards and policies. Both words are generally used to refer to the qualifications, skill sets, units of competency, assessment requirements, credit arrangements and supporting materials produced for training packages.

² The *Standards for Training Packages 2012*, and accompanying policies, are available from the Australian Department of Employment and Workplace Relations website < <https://www.dewr.gov.au/skills-information-training-providers/resources/standards-training-packages-2012>>.

Endorsed components

Product	Description
Qualification	A qualification combines the skills standards (called units of competency) into meaningful groups that meet workplace roles and align to the Australian Qualifications Framework (AQF).
Unit of competency	A unit of competency describes the requirements for effective performance in a discrete area of work, work function, activity or process. They specify the standard against which training delivery and assessment of competency can take place.
Assessment requirements	Assessment requirements accompany each unit of competency and include the performance evidence, knowledge evidence and conditions for assessment.

Non-endorsed components

Product	Description
Skill set	A skill set addresses a particular industry need or a licensing or regulatory requirement. A skill set is not endorsed but includes endorsed units of competency.
Companion volume	This general term refers to any product (including this Implementation Guide) which supports training and assessment.

Training package development

Training packages are developed through a process of national consultation with industry. There are some key stakeholders that drive training package development.

Key stakeholder roles³

COAG Industry and Skills Council (CISC)	The CISC is the ministerial council responsible for industry and skills. The CISC provides a forum for intergovernmental collaboration and decision-making about industry competitiveness, productivity and labour market pressures, and skills development and national training arrangements, including training packages.
The Australian Industry and Skills Committee (AISC)	The AISC was established by the CISC in 2015 to provide industry leadership within the national training system. As well as setting the priorities for the review of training packages in a national review schedule, the AISC approves training packages for implementation.
Industry Reference Committees (IRCs)	IRCs are the key industry advisory bodies to the AISC. They are made up of people who are experts in their particular industry sectors. IRCs drive the process of training package development so that the qualifications and units of competency are aligned with modern work practices.
Skills Service Organisations (SSOs)	SSOs are funded by the Australian Government to provide technical, operational and secretariat support to IRCs. SSOs assist IRCs to identify the skills required for jobs. Under the direction of the IRCs, SSOs develop and review compliant training packages that meet industry needs. Skills Impact is an SSO.
Government	The Australian Government supports the AISC and its network of IRCs and manages the SSOs. State and territory governments (referred to as State or Territory Training Authorities (STAs/TTAs)) canvass stakeholder views about training packages, provide implementation advice, identify issues and develop purchasing guides for training providers.
Vocational education and training regulators	The national VET regulator, the Australian Skills Quality Authority (ASQA), and two state-based VET regulators, Victorian Registration and Qualifications Authority (VRQA) and Western Australian Training Accreditation Council (WA TAC), regulate the training and assessment strategies and practices of registered training organisations. Their aim is to ensure consistency with the requirements of the endorsed components of training packages.

³ More information about key stakeholder roles is available on the AISC website < <https://www.aisc.net.au>>.

The development process

The process used to develop and endorse training packages is based on the following principles:

- open and inclusive industry participation in development, validation and endorsement of training packages
- strong stakeholder engagement and the opportunity for industry to drive change
- highly responsive and capable of meeting industry needs and priorities for new skills
- clear and transparent arrangements for resolving contentious issues
- accountability of all stakeholders for the role that they play in the process.

The diagram summarises the process of training package development. ⁴

⁴ The training package development and endorsement process policy can be downloaded from the Department of Employment and Workplace Relations website <<https://www.dewr.gov.au/aisc/resources/training-package-development-and-endorsement-process-policy>>

Contents of this training package

The *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* contains AQF aligned qualifications, skill sets and units of competency.

Prerequisite requirements

Some units of competency have prerequisite requirements. This means that an individual must be competent in the prerequisite unit(s) of competency before undertaking any assessment in the unit containing the prerequisite(s).

Imported units

Qualifications include units of competency from different training packages, including:

- ACM Animal Care and Management
- AMP Australian Meat Processing
- AUM Automotive Manufacturing
- AVI Aviation
- BSB Business Services
- CHC Community Services
- CPP Property Services
- CUA Creative Arts and Culture
- FBP Food, Beverage and Pharmaceutical
- FWP Forest and Wood Products
- HLT Health
- LGA Local Government
- MSL Laboratory Operations
- MSM Manufacturing
- MSS Sustainability
- PSP Public Sector
- PUA Public Safety
- RII Resources and Infrastructure Industry
- SIR Retail Services
- SIS Sport, Fitness and Recreation
- SIT Tourism, Travel and Hospitality
- TAE Training and Education
- TLI Transport and Logistics.

Please refer to the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package Implementation Guide Release 13 Part 2: Component Details* file for lists of:

- qualifications, skill sets and units of competency in the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package V9.0*
- units of competency with prerequisite requirements
- imported units of competency.

This file can be downloaded from VETNet at:

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>.

Mapping information

Mapping to previous versions of a training package can be useful for delivery and assessment because it:

- outlines the changes between current and previous versions of qualifications, skill sets and units of competency
- states whether the vocational outcomes of the current and previous versions of units of competency and qualifications are equivalent
- shows any components that have been added to, or removed from, the training package.

Note: The mapping tables are summary documents only and cannot be used alone to determine an individual's competence.

Please refer to the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package Implementation Guide Release 13 Part 2: Component Details* file for details of mapping between previous and current qualifications, skill sets and units of competency. This file can be downloaded from VETNet at: <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

RTO use

An RTO may use the mapping information to help design training and assessment strategies, including recognition of prior learning (RPL) systems. In addition to the mapping information, RPL processes must consider other evidence of current competency, for example, how long ago an individual was awarded a superseded unit of competency and current work experience.

Employer use

An employer might use the mapping information to determine whether there are gaps between a qualification held by workers and the current expectations of a job role. Once gaps are identified, this could assist in planning professional development activities.

Credit arrangements

There are no credit arrangements in the AHC training package at the time of publication

How equivalence is determined

Units of Competency

The training package developer determines equivalence based on the definition provided in the *Training Package Products Policy*⁵ which state that:

“Training package developers are responsible for mapping units and determining their equivalence status.

- Where a unit of competency is superseded and the workplace outcome of the unit has changed, the superseding unit must be deemed ‘Not Equivalent’.
- The workplace outcome can be determined to have changed when the skills and knowledge (reflected through the elements, performance criteria and assessment requirements) required to achieve the workplace outcome of the superseded and superseding units cannot be mapped to each other.
- Determinations of ‘Not Equivalent’ may also be used to support licensing, regulatory, legislative or certification requirements. The equivalence table must list the units of competency and clearly identify the status of each unit according to the following categories:
 - **Equivalent** - the workplace outcomes of the superseded and superseding units are equivalent
 - **Not Equivalent** - the workplace outcomes of the superseded and superseding units are not equivalent (refer Section 2.5)
 - **Newly created** - the unit has been created to address an emerging skill or task required by industry
 - **Deleted** - the unit is deleted as the skill or task is no longer required by industry”

If two units are determined to be equivalent, an RTO can recognise an ‘old’ unit as satisfying the outcomes of a new unit (including RPL). However, an RTO cannot assume that no changes are needed for the training and assessment of the new unit.

If a unit of competency is not equivalent to its predecessor, this means that there are significant changes in the new unit. These changes would need to be addressed, for example, through training and assessment, or providing additional RPL evidence.

⁵ The policy is available from the Department of Employment and Workplace Relations website at <<https://www.dewr.gov.au/skills-support-individuals/resources/training-package-products-policy>>

Qualifications

'Training package developers are responsible for mapping qualifications and determining their equivalence status.

- Where a qualification is superseded and the occupational outcome and/or the AQF level of the qualification has changed, the superseding qualification must be deemed 'Not Equivalent'.
- The occupational outcome can be determined to have changed when the skills and knowledge required to achieve the occupational outcome of the superseded and superseding qualifications cannot be mapped to each other.
- Determinations of 'Not Equivalent' may also be used to support licensing, regulatory, legislative or certification requirements.
- The equivalence table must list the qualifications and clearly identify the equivalence status of each qualification according to the following categories:
 - **Equivalent** - the occupational outcomes of the superseded and superseding qualifications are equivalent
 - **Not Equivalent** - the occupational outcomes of the superseded and superseding qualifications are not equivalent
 - **Newly Created** - the qualification has been created to address an original skill or occupational outcome required by industry
 - **Deleted** - the qualification is deleted as the skill or occupational outcome is no longer required by industry.'

Superseded and deleted training package products

A product is **superseded** when another training product replaces it. This happens if the skill needs of industry change so training package developers need to alter a qualification, unit of competency or skill set.

A product is **deleted** when another training product does not replace it. This happens if industry determines that there is no longer sufficient demand for a qualification, unit of competency or skill set. Definition of 'deleted' is also slightly changed in revised policy

I.e., A deleted status indicates that a skill, task, or occupational outcome, is no longer required by industry.

(not same as 'no longer sufficient demand')

The rules around the use of superseded and deleted products for training purposes are in Clause 1.26 of the *Standards for Registered Training Organisation (RTOs) 2015*.

ASQA has a useful guide that explains how to manage the transition from superseded and deleted training products. This can be accessed from:
<https://www.asqa.gov.au/rtos/users-guide-standards-rtos-2015>

Coding conventions

There are agreed conventions for the national codes used for training packages and their components.

Training package codes

Each training package has a unique three-letter national code assigned when the Training Package is endorsed, for example, **AHC** is the code used for the *Agriculture, Horticulture and Conservation and Land Management Training Package*.

The practice of assigning two numbers to identify the year of endorsement is no longer used as it is not consistent with national policy.

Qualification codes

Within the training package, each qualification has a unique eight-character code that is used to identify the qualification, along with its title. The table explains the format of a qualification code for the *Agriculture, Horticulture and Conservation and Land Management Training Package*.

Identifiers	Description	Example for AHC31522
Training package identifier	Three letters	= AHC
AQF level identifier	One number identifying the Australian Qualifications Framework level	= 3
Sequence identifier	Two numbers identifying the sequence of the qualification at that level in the Training Package	= 15
Version identifier	Two numbers identifying the year in which the qualification was endorsed.	= 22

Unit of competency codes

Within the training package, each unit of competency has a unique code (up to 12 characters). The code, as well as the title, is used to identify the unit of competency. The table explains the format of a unit of competency code for the *Agriculture, Horticulture and Conservation and Land Management Training Package*.

Identifiers	Description	Example for AHCIRG401X
Training package identifier	Three letters	= AHC (Agriculture, Horticulture and Conservation and Land Management)
Sector identifier	Two to four letters	= IRG (irrigation)
AQF level indicator	One number that is a guide as to the type and depth of skills and knowledge described in the unit. This identifier is loosely tied to the Australian Qualifications Framework and can range from 1 (indicates Certificate 1) to 8 (indicates Graduate Certificate/Graduate Diploma)	= 4
Sequence identifier	The final numbers identify the sequence of the unit in the particular unit sector and AQF level, and allows each unit to have a unique code	= 01
Cross sector unit	Cross-sector units must have 'X' as the final character	= X

Under the *Standards for Training Packages*, units of competency no longer include a version identifier (e.g. A, B, C). In training.gov.au the release history of each unit is shown in both the web view of the unit and in the unit modification history and mapping tables.

Key work and training requirements in the industry

Agriculture, Horticulture, Conservation and Land Management play vital roles in Australia, contributing to the social, economic and environmental sustainability of the nation. The industry has been at the forefront of Federal, State and Territory Government policies and Australian economic growth throughout the modern history of Australia.

The Agriculture, Horticulture and Conservation and Land Management (AHC) Training Package covers the majority of training in the businesses and operations that underpin the overwhelming majority of Australia's regional, rural and Indigenous communities. The sector employs almost 350,000 people, with more than 72,000 learners serviced by 643 Registered Training Organisations (2017 figures).

Table 1: Industry snapshot

Revenue	Industry Value Added ⁶	Exports	Imports	Wages	Domestic Demand
\$144.4bn	\$39.1bn	\$18.4bn	\$1.5bn	\$11.2bn	\$127.4bn

Source: IBISWorld Industry Wizard

The AHC Training Package has 902 Units of Competency across 100 qualifications and 54 Unit Sectors. Each qualification within this Training Package typically includes units crossing several different industry sectors.

More than 80 per cent of Australian land hosts activities related to the AHC Training Package, with dominant uses including livestock grazing of native vegetation, grazing of modified pastures, conservation and parks, and dryland cropping. This excludes horticulture, micro-production, landscaping and gardening work within Australia's urban areas.

Sector description

The agriculture, horticulture and conservation and land management industry sector is highly diverse, encompassing businesses that operate in the following sub-sectors:

<p>Amenity horticulture</p> <ul style="list-style-type: none"> • Arboriculture • Landscape services • Gardening services • Turf and sports turf management • Permaculture • Green infrastructure <p>Production horticulture</p> <ul style="list-style-type: none"> • Turf production (commercial) • Nursery production • Retail nursery 	<p>Agriculture support services</p> <ul style="list-style-type: none"> • Shearing, cropping and agricultural support service • Water trading • Grain storage services • Agronomy <p>Agricultural product wholesaling</p> <ul style="list-style-type: none"> • Fruit and vegetable wholesaling • Cereal grain wholesaling • Wool wholesaling
--	--

⁶ Industry value added (IVA) is the contribution by businesses in each industry to gross domestic product (GDP). Put another way, IVA records the market value of the goods and services produced by the industry, with the cost of goods and services used in production subtracted from the total.

<ul style="list-style-type: none"> • Floriculture production • Vegetable growing • Fruit tree growing • Nut tree growing • Seed processing <p>Broadacre farming</p> <ul style="list-style-type: none"> • Grain growing • Fodder growing • Sugar cane growing • Cotton growing • Seed production <p>Livestock farming</p> <ul style="list-style-type: none"> • Sheep farming • Beef cattle farming • Sheep-beef cattle farming • Dairy cattle farming • Poultry farming • Other livestock farming <p>Mixed crop and livestock farming</p> <ul style="list-style-type: none"> • Grain-sheep farming • Grain-beef cattle farming • Lifestyle block farming 	<ul style="list-style-type: none"> • Fish and seafood wholesaling <p>Conservation & Land Management</p> <ul style="list-style-type: none"> • National parks • Nature reserves • Council reserves • Cultural and Heritage Sites • On Country lands, waterways and seas • Corridors (national, state and local) • Botanical gardens • Landcare • Coastcare • Rivercare • Seed banks • Private land <p>Landscaping</p> <ul style="list-style-type: none"> • Landscaping construction • Public and private space design and scoping • Feature installation and design • Lawn and garden installation and design • Residential, office & commercial building landscaping and maintenance services • Watering systems and features
---	---

Businesses

As at June 2019, there were 179,231 businesses across agriculture, horticulture, agricultural product wholesaling and parks and gardens operations⁷. Over 70 per cent (125,971) of businesses were non-employing, and 28 per cent (50,692) were small businesses, employing fewer than 20 people. There were 2,434 medium businesses (between 20 and 199 employees) and 101 large businesses (over 200 employees).

Figure 1: Business locations by state

Source: Australian Bureau of Statistics, 2020, 8165.0 Counts of Australian Businesses, including Entries and Exits, June 2015 to June 2019

AHC-related activities are a significant source of employment, particularly in regional, rural and remote areas, and make an important contribution to the Australian economy (see Figure 2).

⁷ Australian Bureau of Statistics, 2020, 8165.0 Counts of Australian Businesses, including Entries and Exits, June 2015 to June 2019

Figure 2: AHC Industry Sector Performance, 2019-2020

Australian Industry Sector	Employment	Wages (\$m)	Revenue (\$m)	Contribution to GDP (\$m)
Floriculture Production	2,090	85.3	276.8	105.2
Under Cover Vegetable Growing	2,473	156.8	757.7	340.5
Outdoor Vegetable Growing	12,911	564.8	4,313.1	1,277.4
Rice Growing	290	3.3	27.2	7.2
Grain Growing	27,537	387.8	13,044.8	4,043.9
Sugar Cane Growing	9,179	132.4	1,037.5	380.9
Cotton Growing	4,783	184.0	1,398.6	564.6
Hay and Other Crop Growing	4,239	114.7	2,100.7	380.9
Apple, Pear and Stone Fruit Growing	6,856	107.8	954.1	201.5
Grape Growing	11,993	263.6	1,559.8	627.1
Olive Growing	1,394	15.0	119.3	41.7
Citrus Fruit, Nut and Other Fruit Growing	12,858	397.3	3,972.8	948.2
Egg Farming	3,994	97.6	868.2	157.4
Poultry Meat Farming	2,201	56.0	580.7	140.6
Sheep Farming	18,273	213.0	4,561.1	1,590.3

In addition to businesses, each level of government and a number of Non-Government Organisations are employers of graduates from the AHC Training Package.

The breadth of the scope of work undertaken by these businesses and operations can be illustrated by Australian Land Use mapping, which is regularly undertaken at various levels of government as

information required for current and future policies and strategies. The complexity of activities covered is illustrated in the size and training coverage of the AHC Training Package.

Figure 4: Land use in Australia

Source: *Australian State of the Environment 2016*
<https://soe.environment.gov.au/theme/land/topic/2016/land-use-and-management>

It should be noted that many activities in Horticulture, Conservation & Land Management, Landscaping and micro-production also take place in urban intensive areas.

AgriFutures Australia has identified the decline in land used for farming in Australia as a current trend which is likely to be ongoing.

Future needs

Each year, Skills Impact works on behalf of Industry Reference Committees (IRCs) to develop an IRC Skills Forecast and Proposed Schedule of Work (IRC Skills Forecasts).

Through consultation with industry, IRC Skills Forecasts identify skills gaps, emerging skills needs and associated training needs for industry, and determine whether there is a need to change training packages. The documents propose a plan for reviewing and developing the relevant units, skill sets and qualifications. In April of each year, the relevant IRC submits the Skills Forecast to the [Australian Industry Skills Committee](#) (AISC) for their consideration and approval.

The AISC draws on this information to update their AISC National Schedule, and to determine future Training Package Projects. IRC Skills Forecasts are available to view and download from the Skills Impact website <https://www.skillsimpact.com.au/irc-skills-forecasts/>.

The Amenity Horticulture, Landscaping, Conservation and Land Management Industry Reference Committee (IRC) has responsibility for overseeing the development of industry units of competency, skill sets and qualifications relative to the following sectors:

- Arboriculture
- Carbon Farming
- Conservation and Land Management
- Green Infrastructure.
- Landscaping
- Nature reserves and conservation parks
- Parks and Gardens
- Permaculture
- Production Nursery
- Retail Nursery
- Turf
- Vertebrate and invertebrate pest management
- Weed management.

The Agriculture and Production Horticulture Industry Reference Committee (IRC) has responsibility for overseeing the development of industry units of competency, skill sets and qualifications relative to the following sectors:

- Agricultural chemicals.
- Agricultural irrigation
- Agricultural support services
- Broadacre cropping and farming
- Floriculture production
- Fruit growing
- Livestock farming
- Nut growing
- Vegetable growing.

Implementation information

Industry sectors and occupational outcomes of qualifications

The *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* includes units of competency from the following industry sectors.

AGB	Agribusiness	LSK	Livestock
AIS	Artificial Insemination	MAR	Marine
ARB	Arboriculture	MDC	Medicinal Crops
BAC	Broad Acre Cropping	MER	Merchandising and Sales
BEK	Beekeeping	MKH	Milk Harvesting
BER	Biosecurity Emergency Response	MOM	Machinery Operation and Maintenance
BIO	Biosecurity	NRM	Natural Resource Management
BUS	Business	NSY	Nursery
CCF	Community Coordination and Facilitation	OCM	On Country Management
CFP	Carbon Farming	ORG	Organic Production
CHM	Chemicals	PCM	Plant Culture and Maintenance
CMN	Common	PER	Permaculture
COM	Composting	PGD	Parks and Gardens
CSW	Cultural Sites Work	PHT	Production Horticulture
DER	Deer	PLY	Poultry
DES	Design	PMG	Pest Management
DRG	Drainage	PRK	Pork
DRY	Dairy	SAW	Soil and Water Conservation
ECR	Ecological Restoration	SDT	Seed Processing

Sector overview

Agriculture and agribusiness

Agriculture and Agribusiness are diverse sectors including both plant and animal-based production systems along with supporting Agribusiness enterprises that supply agriculture goods and services. Job roles within the sector range from farmhands, farm business managers and include numerous agricultural service roles. This sector is a leader in the uptake and development of new technologies and attracting investment on an international level.

Australian producers have a reputation for green and safe agricultural products which provides a marketing advantage that must be retained. As a result, biosecurity will be an important issue as Australia develops its export trade in agricultural goods. There is an increased interest in the area of carbon farming for land owners especially in the area of Emissions Reduction Fund projects which are supported by the Clean Energy Regulator.

Agricultural chemicals

Agricultural chemicals and veterinary medicines play an essential role in maintaining and improving productivity of agriculture and related industries. The registration of chemicals for use in Australia is controlled by the Australian Pesticides and Veterinary Medicines Authority (APVMA). State and territory governments control the use of pesticides and veterinary medicines. The various state jurisdictions have a range of training requirements for the use and purchase of various classes of pesticides and veterinary medicines.

Currently there is a National Agvet Chemical Task Force looking at developing a more harmonised approach to chemical training requirements. Once this work is complete, a more comprehensive review of Training Package products will be required to ensure vocational training options meet the needs of all stakeholders.

Animal Reproduction

Farmers need a range of skills and knowledge to manage the reproduction of animals, helping them to keep up with the high demand for products like meat, dairy and wool. Skills to identify breeding objectives, genetic influences, animal soundness and animal breeding health have been used for generations to increase livestock and poultry production and profitability. Recent developments in the availability of technologies have made this work even more effective and efficient, improving animal welfare, profitability and sustainability.

Arboriculture

Arborists work in private and government positions to foster the economic, ecological, environmental, health and social benefits of trees and professional tree care. Arborists provide for the care and management of trees in conservation and tree preservation roles, tree climbing, tree maintenance, and the diverse operations of vegetation management, power line clearance, professional tree management and urban forestry. Consulting arborists have professional consulting, expert witness, research and academic roles in diagnostic testing and tree assessment.

Beekeeping

Beekeeping is the maintenance of native and/or honey bee colonies, commonly in hives, by humans. A commercial beekeeper (or apiarist) keeps bees in order to collect their honey and other products that the hive produces (including beeswax, propolis, pollen, and royal jelly) for sale, to pollinate crops, and/or to produce bees for sale to other beekeepers. Beekeeping is a form of animal husbandry that involves providing feed when nectar and pollens are lacking, preventing infections from various microbes and diseases and dealing with parasitic mites.

Broadacre cropping

Broadacre cropping or farming on arable land exists in Australia wherever farming in the soil is possible, especially across the grain and wheat belts, and for more water intensive crops along the Murray river and in the tropics. Workers in the sector must be skilled in how to grow their crops and related tasks.

Carbon farming

Carbon farming is the process of changing agricultural practices or land use to increase the amount of carbon stored in the soil and vegetation (sequestration) and to reduce greenhouse gas emissions from livestock, soil or vegetation (avoidance). Carbon farming projects contribute to the reduction of Australia's net greenhouse gas emissions by providing incentives to reduce emissions through the Emissions Reduction Fund and non-ERF markets such as voluntary markets (for example, enterprises such as Qantas and Shell) and secondary markets where carbon credits are sold to others who then on sell.

Community coordination and facilitation

Workers in this sector are generally responsible for fostering, promoting, organising and supporting community groups to undertake conservation activities.

Composting

There are approximately 140 businesses around Australia recovering more than 5.2 million tonnes of organic waste and turning it into useful products and services each year. New products are continuously being developed for environmental applications such as erosion control and storm water treatment.

Qualifications and units of competency enable workers to process material into compost-based products such as soil conditioners, mulches, garden soils, top dressing soils and potting mixes and tailored products to be developed for agricultural applications such as fruit and vegetables, grains, pasture improvement and forestry.

Employment in this industry is growing and the units in this Training Package will give employees a career pathway in this and related industries.

Conservation coordination and facilitation

The Conservation and Land Management sector is made up of workers from unskilled to professional levels and includes a large cohort of volunteer workers. There are a number of different areas people may work in the conservation and land management sector. Some examples are conservation earthworks which are involved in the design and implementation of earthworks associated with soil conservation on rural properties, erosion and sediment control on rural, urban and infrastructure construction sites.

Cultural Sites Work

Aboriginal and Torres Strait Islander cultures possess skills and knowledge that are crucial to land and sea management activities, including conservation and cultural heritage roles. Some of these skills are described in nationally endorsed qualifications, skill sets and units to equip learners for jobs as council workers, rangers, conservation field officers, cultural and heritage officers, land council site officers and tourism operators and guides.

Dairy

The Dairy Industry is one of Australia's major rural industries and is located across the temperate and some subtropical areas of Australia. The bulk of milk production occurs in south-eastern Australia with Victoria having the largest number of dairy farming enterprises. The associated downstream milk processing industry is also concentrated in the south-eastern regions. Dairy Industry enterprises range from large corporations through to small owner operators. The industry has had a long-term commitment to training which is promoted through its peak body

Dairy Australia. This sector of training covers troubleshooting the machines used in large scale milk harvesting.

Ecological restoration

This sector is mostly involved in conservation and restoration of ecological areas in order to regenerate bushlands and improve the ecological integrity and biodiversity of an area. This sector employs a high proportion of volunteers.

Environmental Sustainability

Sustainability in the broadest sense refers to the ability to maintain or support a process continuously over time. While sustainability can be broken into three areas; economic, social and environmental, with respect to agriculture and horticulture, sustainability should perhaps be considered as actions that seek to prevent depletion of natural, physical, human and economic resources, so they will remain available for the long term. This is all encompassing for a successful business.

As key drivers for all industry sectors, the importance of environment and sustainability or environmental sustainability must be explicitly taught. The units of competency pertaining directly to this are now core units of competency in both agriculture and horticulture general qualifications.

Students are most likely to engage if this is taught in a meaningful and connected manner. Every enterprise uses resources, and those resources need to be looked at from the point of view of sustainability.

It is the role of the RTO to contextualise sustainability to ensure the student engages. Likely engagement occurs where the student is asked to consider the topic of environmental sustainability from their own perspective in their own workplace. It must be emphasised that the sustainability conversation is not simply about 'organic, green, recycling and careful water use'. Ask students to consider every item, machine, consumable, worker, animal, soil additive and chemical. The list of items, actions and inputs that can be considered in order to improve environmental sustainability is endless.

The RTO has achieved a competent outcome when the student capably understands how they, as an individual, can contribute to and improve any aspect of environmental sustainability in their workplace.

Explosives

These units are strictly regulated and are mostly for use in the pest management industry, primarily for the destruction of rabbit warrens.

Fauna

This sector units are utilised across the Conservation and Ecosystem certificates and relate to identifying and monitoring fauna. This sector is of use for rangers and organisations that require ranger like tasks to be performed.

Feedlot

Feedlot operational employees fall into three main classifications: pen riders; feeding and milling operators and feedlot maintenance workers. The *Certificate III in Feedlot Operations* is divided into three streams to reflect these job roles while providing maximum transferability of core and common skills.

Fire

The Fire sector in the AHC training package focuses on burning for ecological purposes. It uses the knowledge of First Nations People, who work closely with Skills Impact to make sure the units are culturally appropriate, and the knowledge adequately captured. The Country Fire Association has also

been heavily consulted to make sure these units are distinctly ecological in nature, as opposed to the Public Safety (PUA) training package which focuses on fire extermination for a professional fire fighter.

Floriculture

Floriculture or flower growing involves the growing, harvesting and preparing flowers and foliage for sale. Floriculture businesses produce fresh and dried flowers and foliage for wholesale flower markets, florists and retail outlets, and increasingly for overseas exporting. The range of different flowers and foliage is immense and could include roses, carnations, orchids, native flowers, bulb and annual flowers, and tropical flowers. Some flower farms also grow flowers in open fields for their essential oils.

Green Infrastructure

Roof garden, vertical wall and green facade infrastructure is a subset of the 'green infrastructure' or 'living infrastructure' industry sector, which is of increasing significance to a range of stakeholders (product suppliers, government policy makers, builders/property developers, landscapers/horticulturalists and the community) as increasing urbanisation motivates green infrastructure projects in urban development for aesthetic, environmental, economic and/or social reasons.

Irrigation

Irrigation is the artificial application of water to the land or soil. It is used to assist in the growing of agricultural and horticultural crops, maintenance of landscapes, and revegetation of disturbed soils in areas to replicate the natural rainfall during dry periods. Irrigation systems are also used for dust suppression, disposal of sewage, and in mining. Irrigation is often associated with drainage, which is the natural or artificial removal of surface and sub--surface water from a given area. The irrigation qualifications and units of competency support the skills base of the industry's retailers, designers, managers, installers and maintenance workers.

The irrigation industry design, manage, install, maintain and monitor irrigation systems ranging from domestic systems through to large commercial irrigation systems. This may include open irrigation and drainage, pressurised or gravity fed irrigation systems. Job roles within the sector range from irrigation installation assistant to irrigation system designer. This sector is a leader in the uptake of technology such as applications (APP) based technology, controller and sensor technology and drones.

Lands, parks and wildlife

Lands parks and wildlife officers, rangers and managers are involved in the management and maintenance of areas of native and cultural significance. They may be employed by government or non-government organisations. Roles will generally involve a mixture of conservation and restoration tasks as well as tourism, education, construction and pest management.

Landscape Construction and Design

A skilled workforce of landscape professionals design, construct and maintain the gardens and green spaces in our public spaces and backyards. As urban city blocks get smaller, people are looking to landscapers to create and deliver outcomes where they can get the most out of their garden space. Many backyards these days are an extension to the living room, so it is important they offer a safe, comfortable, and sustainable space for entertainment and enjoyment. Well-designed public gardens, parks, and streetscapes increase the liveability of local communities.

Marine

The Marine sector is a group of units that focus on ecological work being undertaken at sea. It recognises the unique needs of these rangers who work in marine environments, as there are skills unique to working in the ocean, even separate from other aquatic environments.

Medicinal Cannabis

Working in the medicinal cannabis industry in Australia involves working in medium to large sized protected cropping facilities where a range of skilled work is undertaken in controlled growing, licensed medicinal cannabis operations. Workers in this sector are required to be over 18 years of age must comply with strict workplace security and regulatory employment obligations while undertaking cultivation and production practices. Tasks may be associated with the propagation, growth and harvesting of the plant and job roles include cultivation technicians and cultivation supervisors and managers. The Australian medicinal cannabis industry is expected to undergo major developments over the next couple of years and significant production and manufacturing capacity coming online from the licensed sector.

On Country Management

On Country Land Managers, as the title suggests, are responsible for the management of Aboriginal and/or Torres Strait Islander owned/held lands. These lands are used for a range of activities including tourism, horticulture and agriculture. On Country management job roles may include a range of these activities as well as conservation and restoration of cultural and heritage sites. Aboriginal and/or Torres Strait Island On Country Management officers generally use a combination of traditional and contemporary approaches to land management.

Organic production

Organic farming focuses on utilising natural, non-synthetic farming techniques. These include crop rotation, the use of green manure and biological pest control. Organic farms aim to be sustainable with an emphasis on the use of renewable resources. The considerations of energy, soil and water resources as well as the maintenance of environmental quality are key attributes of organic farming.

Parks and Gardens

The Australian parks and gardens industry maintains and manages public green spaces for recreation and leisure that benefit all Australians. Many parks and gardens areas are home to native and unique plant species, animals and historic structures. They hold cultural and social importance and are visited by thousands of locals and tourists every year. The diversity, beauty, safety and sustainability of these parks and gardens is managed and maintained by a skilled workforce of grounds keepers and gardeners. Park managers are responsible for staff and park operations as well as managing contracts for outsourced services

Permaculture

Permaculture is a multi-disciplinary ecological design science focussed on care for the earth, care for people and all species, sharing of surpluses and setting limits to industrial and exploitative growth and consumption. It is based on the premise that the planet is a finite ecological system with limited energy and material resources to be shared and managed in a manner inspired by nature.

Pest management

This covers non-urban pest management roles. Integrated pest management requires workers in this field to be able to apply several management options strategically in order to reduce pest damage levels. Pest management officers may be employed by government agencies or private organisations. Pest management may also be undertaken by workers in other industry sectors such as: agriculture; horticulture; conservation and land management; parks and wildlife

services; parks and gardens; viticulture and wine grape growing. Pest management covers both plant and animal pests.

Pork

The Australian Pork Industry is spread throughout Australia with a range of enterprise sizes and production systems. There are three main types of pig farming systems: Indoor Housing, Outdoor Bred and Free Range. The pork industry is particularly focused on addressing the welfare needs of pigs, environmental stewardship and the education of stock persons who handle pigs.

Poultry

The Poultry Industry is established in all states of Australia with the focus of the industry in the three eastern states. It is located around capital cities or major provincial centres that are close to cereal grain cropping areas. It comprises two main sectors: poultry meat and egg layer industries. Poultry industry enterprises range from large corporations through to small owner operators. Animal welfare and biosecurity are two key issues which the industry is seeking to address through training.

Production horticulture

Production horticulture is a diverse industry which involves growing and harvesting fruit or vegetables. Production horticulture businesses produce fresh and dried fruit and vegetables for local markets, processing and exporting. The range of produce is vast and could include many varieties of different fruits, nuts and vegetables. Many production horticulture businesses operate as farms growing vegetables, while others are based on extensive orchards. Some businesses are intensive and grow fruit, vegetables and mushrooms in controlled environments.

Production nursery

Production or wholesale nurseries propagate and supply plants to supermarkets, retail nurseries, garden centres and landscapers. They are often large and are generally located on the outskirts of major cities. They may employ from ten to 100 staff. Some also maintain retail outlets.

Production nurseries can also be found in some municipal councils, government departments, landscape companies and 'greening' or revegetation organisations. These nurseries grow plants for local landscape and revegetation projects. Other businesses allied to the nursery industry include indoor plant hire and maintenance companies and suppliers of garden products.

Protected horticulture

Protected Horticulture is a fast growing diverse sector which includes the production of vegetables, and flowers using a ranged of protected horticulture facilities ranging from commercial hydroponics and greenhouse facilities through to covered crops. Job roles within the sector range from picker, packer, crop and nursery worker through to senior grower and integrated pest manager (IPM). This sector is a leader in the uptake of technology such as controlled environment technology, robotics and automated technology.

Retail nursery

Retail nurseries, also called Garden Centres, sell plants and gardening products to the general public. They employ workers with a good knowledge of plants and gardening products. Most importantly they require workers who can communicate well with customers.

Rural Merchandising

Rural merchandising supports diverse sectors of the agricultural industry, including production horticulture, broad acre crop production, nursery production and protected cropping. Job roles within the sector range from rural sales assistants to specialist rural merchandisers in areas such as farm machinery, irrigation, livestock, farm chemicals, fertiliser and soil ameliorant sales.

Seed processing

Seed processing involves the cleaning and grading of seed after it has been harvested and dried to meet required levels of physical purity and germination. Cleaning removes extraneous material while grading aims at removal of less developed, dead and diseased seeds. Careful handling and specific procedures are necessary to maintain seed vigour and a satisfactory shelf life in storage. Workers in this industry operate seed processing equipment and machinery, pack and store seed including the operation of vehicles such as a forklift.

Seed testing

Seed testing is the science of evaluating seed quality for agricultural and horticultural purposes. This includes the physical quality of a seed lot including freedom from unwanted seeds and material, and evaluation of the germination potential of the seed. Seed may also be tested for freedom from seed-borne diseases. Seed testing plays a major role in the international trade in seed.

Shearing and wool handling

Professional shearers and wool handlers work as trades' people within the wool harvesting industry sector. Regardless of level they are required to be physically fit, work quickly and consistently with their hands, work confidently with sheep and work as part of a team.

Sports turf management

The Sports Turf Management Industry involves the construction and maintenance of grassed and lawn areas which are used for sport and recreation. The sports turf management industry employs people who care for and manage turf playing surfaces. There are several major employers including local councils, sporting clubs, golf clubs and horse racecourses. The workplaces include bowling greens, lawn tennis courts, cricket wickets, sports fields and ovals, recreational parks and grounds, domestic and commercial mowing and lawn maintenance operations and commercial turf farms. Work in the sports turf management industry focuses on the maintenance of these surfaces and preparation for play.

The work may involve early starting times and some weekend work. Skills in the operation of specialist machinery and equipment are required for work in this industry. At the supervisory and management level, there is also emphasis on agronomy, greens reconstruction and renovation, irrigation management, chemical use and healthy turf growth. Managers are responsible for budgets and may have to report to club committees.

Viticulture

Viticulture is a diverse sector including production of grapes for wine production and table grapes. Job roles within the sector range from pickers, technical scouts to vineyard manager. This sector is a leader in the uptake of technology such as drone and automation.

Water Trading

Water trading is a part of the WAT training sector and refers to the trading of water and understanding of water entitlements that are attached to parcels of land. This includes carryover water and buying and selling water on approved platforms as well as private sales.

Wool

Wool classers normally work in shearing sheds as a member of a wool harvesting and preparation team. Some work as wool valuers and assess the value of the wool on behalf of wool buyers, brokers and domestic and overseas woollen mills or in wool rehandling facilities.

Occupational outcomes

The units of competency, skill sets and qualifications in the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* cover a diverse range of work activities within

the industry. The following table lists the qualifications and provides an overview of occupational outcomes for each qualification.

Qualification	Overview of occupational outcomes
<p>Graduate Diploma</p> <ul style="list-style-type: none"> ▪ AHC80120 Graduate Diploma of Arboriculture 	<p>The Graduate Certificate reflects the role of advanced practitioners who require high-level knowledge in a range of contexts to carry out highly skilled/specialist work, including research.</p> <p>It is also a pathway to further learning.</p>
<p>Advanced Diploma</p> <ul style="list-style-type: none"> ▪ AHC60319 Advanced Diploma of Agribusiness Management ▪ AHC60422 Advanced Diploma of Conservation and Ecosystem Management ▪ AHC60520 Advanced Diploma of Arboriculture 	<p>The Advanced Diploma reflects the role of managers, consultants and leaders who are required to apply specialised knowledge in a range of contexts and undertake advanced skilled or paraprofessional work.</p> <p>The Advanced Diploma serves also as a pathway for further learning.</p>
<p>Diploma</p> <ul style="list-style-type: none"> ▪ AHC50122 Diploma of Agriculture ▪ AHC50320 Diploma of Production Horticulture ▪ AHC50422 Diploma of Horticulture Management ▪ AHC50520 Diploma of Arboriculture ▪ AHC50621 Diploma of Landscape Design ▪ AHC50820 Diploma of Nursery Management ▪ AHC51019 Diploma of Sports Turf Management ▪ AHC51120 Diploma of Conservation and Ecosystem Management ▪ AHC51222 Diploma of Community Coordination and Facilitation ▪ AHC51316 Diploma of Pest Management ▪ AHC51422 Diploma of Agribusiness Management ▪ AHC51519 Diploma of Viticulture ▪ AHC51619 Diploma of Irrigation Design ▪ AHC51920 Diploma of Applied Agronomy ▪ AHC50621 Diploma of Landscape Design ▪ AHC52021 Diploma of Landscape Construction Management ▪ AHC52122 Diploma of Permaculture 	<p>The Diploma qualification reflects the role of individuals who apply integrated technical and theoretical concepts in a broad range of contexts and undertake skilled or paraprofessional work. The Diploma is suitable for supervisors, managers, consultants and specialist job roles.</p> <p>The Diploma serves also as a pathway for further learning.</p>
<p>Certificate IV</p> <ul style="list-style-type: none"> ▪ AHC40122 Certificate IV in Agriculture ▪ AHC40219 Certificate IV in Protected Horticulture ▪ AHC40320 Certificate IV in Production Horticulture ▪ AHC40422 Certificate IV in Horticulture ▪ AHC40620 Certificate IV in Nursery Operations ▪ AHC40920 Certificate IV in Conservation and Ecosystem Management 	<p>The Certificate IV qualification reflects the role of individuals to undertake work in varied contexts using a broad range of specialised knowledge and skills. Certificate IV is suitable for senior workers and technicians who supervise or lead teams. Certificate IV also serves as a pathway for further learning.</p>

Qualification	Overview of occupational outcomes
<ul style="list-style-type: none"> ▪ AHC41019 Certificate IV in Agribusiness ▪ AHC41119 Certificate IV in Irrigation Management ▪ AHC41316 Certificate IV in Wool Classing ▪ AHC41720 Certificate IV in Pest Management ▪ AHC42021 Certificate IV in Landscape Construction Management ▪ AHC42122 Certificate IV in Permaculture ▪ AHC42320 Certificate IV in Medicinal Cannabis Cultivation and Production ▪ AHC42421 Certificate IV in Landscape Design

AHC33016 Certificate III in Wool Clip Preparation	<ul style="list-style-type: none"> ▪ Owner wool classer
AHC33116 Certificate III in Advanced Wool Handling	<ul style="list-style-type: none"> ▪ Shearing shed hand
AHC41316 Certificate IV in Wool Classing	<ul style="list-style-type: none"> ▪ Wool classer

Key features of the training package and the industry that will impact on the selection of training pathways

A pathway is the route or course of action taken to get to a destination. A training pathway means the learning activities or experiences used to attain the competencies needed to achieve career goals.

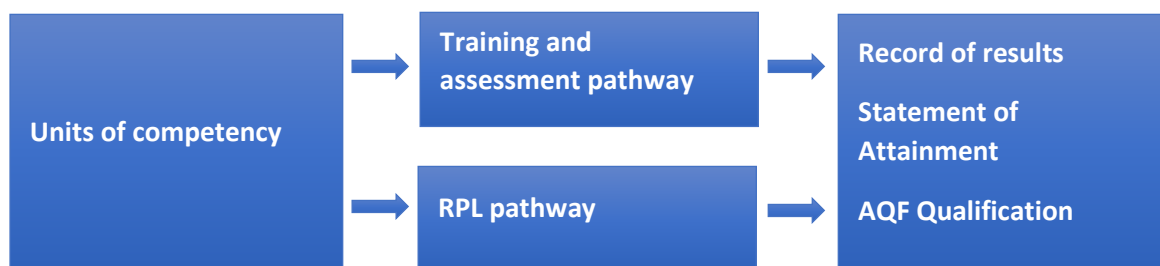

AQF Qualifications Pathways Policy Requirements

The AQF Qualifications Pathways Policy,⁹ as part of the Australian Qualifications Framework, supports students' lifelong learning by aiming to:

- recognise the multiple pathways that students take to gain AQF qualifications, and that learning can be formal and informal
- enhance student progression into and between AQF qualifications, both horizontally (across AQF qualifications at the same level) and vertically (between qualifications at different levels).
- support the development of clear pathways in the design of qualifications.

Multiple pathways to gain qualifications

In line with requirements of the *AQF Pathways Policy*, the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* allows for individuals to follow a training and assessment pathway, or recognition of prior learning (RPL) pathway (or combinations of each pathway) to complete the units of competency needed to be awarded a qualification. These pathways are shown in the following diagram.

Training and assessment pathway

Training and assessment pathways usually incorporate a mix of formal, structured training and workplace experience to build skills and knowledge together with formative and summative assessment activities through which individuals can demonstrate their skills and knowledge. Structured training and assessment courses may be conducted:

- face-to-face
- by distance or e-learning
- in the workplace.
- by combining face-to-face, distance, e-learning and/or workplace delivery.

⁹ The AQF Qualifications Pathways Policy is available to download from the Australian Qualifications Framework website: <<http://www.aqf.edu.au/aqf/in-detail/aqf-policies/>>

Recognition of Prior Learning (RPL) pathway

RPL acknowledges that individuals may already have the skills and knowledge required for all or part of a qualification. Individuals can gain credit towards a qualification by providing evidence of their current competency, which may have been gained through formal or informal learning, work experience or general life experience.

Australian apprenticeships/traineeships

Apprenticeships and traineeships are legally binding training arrangements, between an employer and employee, which combine training with paid employment. Australian Apprenticeships are delivered through a cooperative arrangement between the Australian Government, State and Territory Governments, industry employers and RTOs. Each State or Territory Training Authority (STA/TTA) is responsible for apprenticeships and traineeships in its jurisdiction.¹⁰

RTOs should contact relevant jurisdictional agencies to clarify available support for implementation of particular qualifications.

VET for secondary students

Vocational Education and Training (VET) programs enable students to acquire workplace skills and knowledge while they are still at school. Successful completion of a VET program provides a student with a nationally recognised AQF qualification (or particular units of competency), usually as part of a senior secondary certificate. VET programs are packaged and delivered in various ways across Australia. The three main delivery arrangements used are:

- schools hold RTO status
- school sectoral bodies (such as Boards of Studies or regional offices) hold RTO status on behalf of a group of schools
- schools work in partnership with RTOs.

The following qualifications may be suitable for delivery to secondary students:

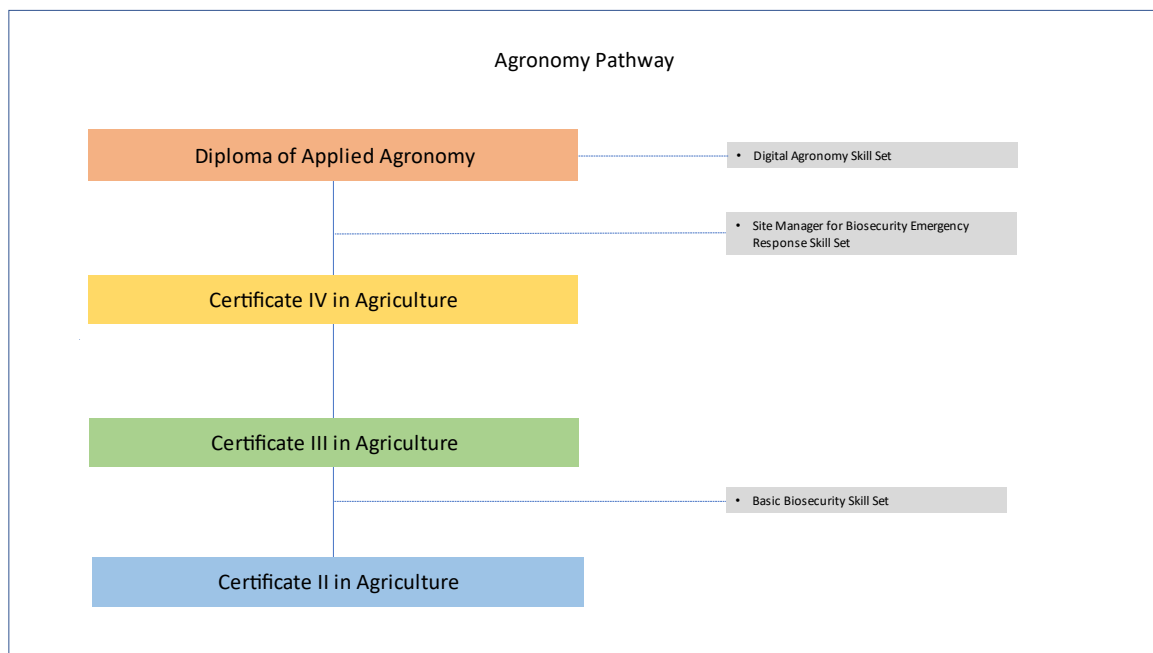

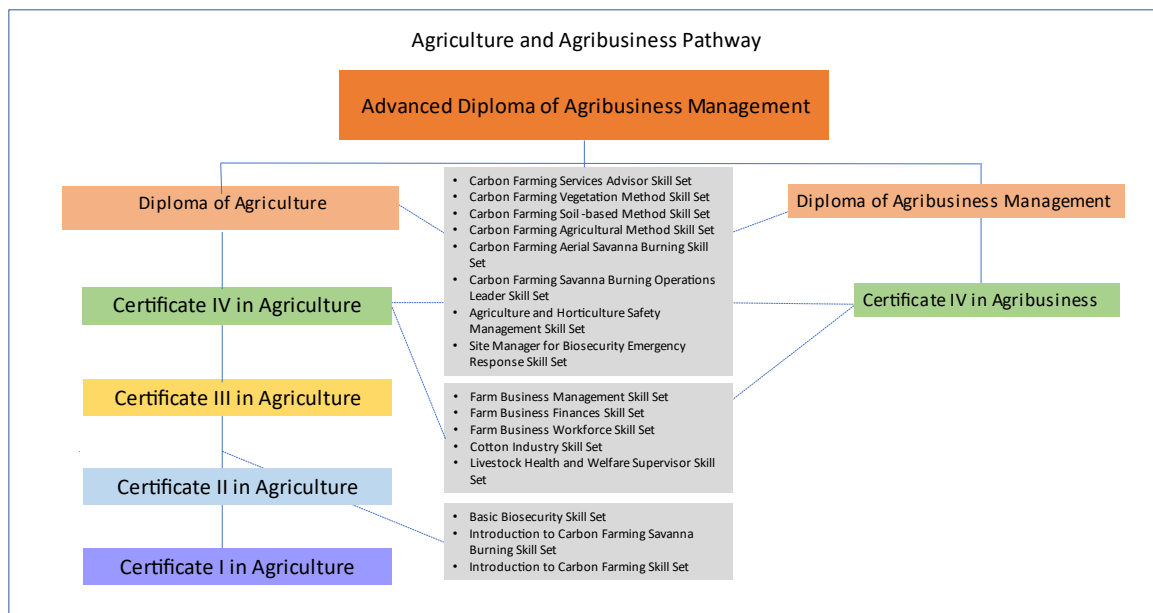

- Certificate I in Agriculture
- Certificate I in Conservation and Ecosystem Management
- Certificate I in Horticulture
- Certificate I in Permaculture
- Certificate II in Agriculture
- Certificate II in Arboriculture
- Certificate II in Conservation and Ecosystem Management
- Certificate II in Horticulture
- Certificate II in Irrigation
- Certificate II in Landscaping

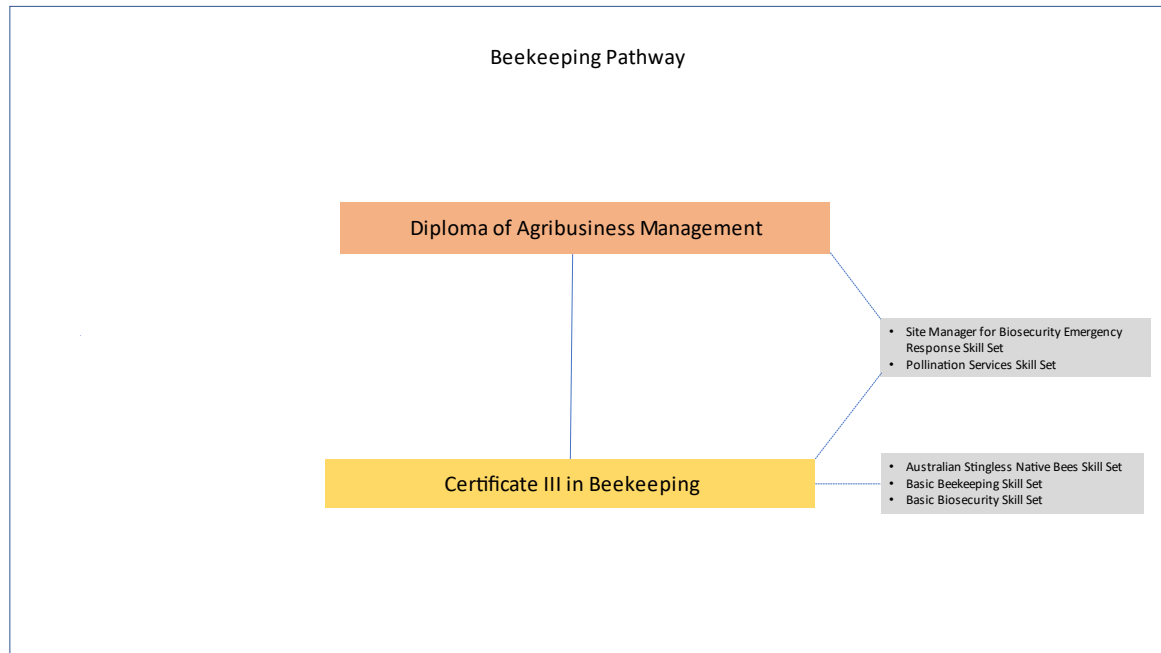

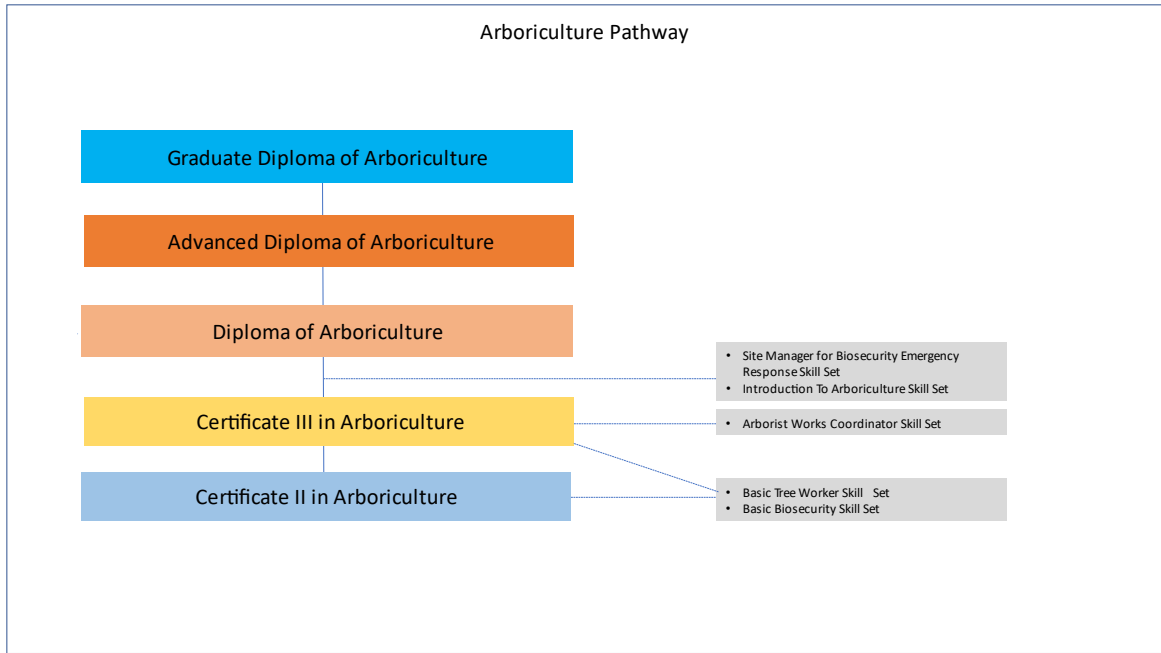

¹⁰ The Australian Apprenticeships website has information about traineeships and apprenticeships. Visit <www.australianapprenticeships.gov.au> for more information. STA contact details are provided in the Links section of this Implementation Guide.

- Certificate II in Parks and Gardens
- Certificate II in Permaculture
- Certificate II in Production Horticulture
- Certificate II in Nursery Operations
- Certificate II in Protected Horticulture
- Certificate II in Rural Operations
- Certificate II in Shearing
- Certificate II in Sports Turf Management
- Certificate II in Wool Handling
- Certificate III Beekeeping
- Certificate III in Conservation and Ecosystem Management
- Certificate III in Certificate III in Aboriginal and/or Torres Strait Islander Cultural Sites Work
- Certificate III in On Country Management

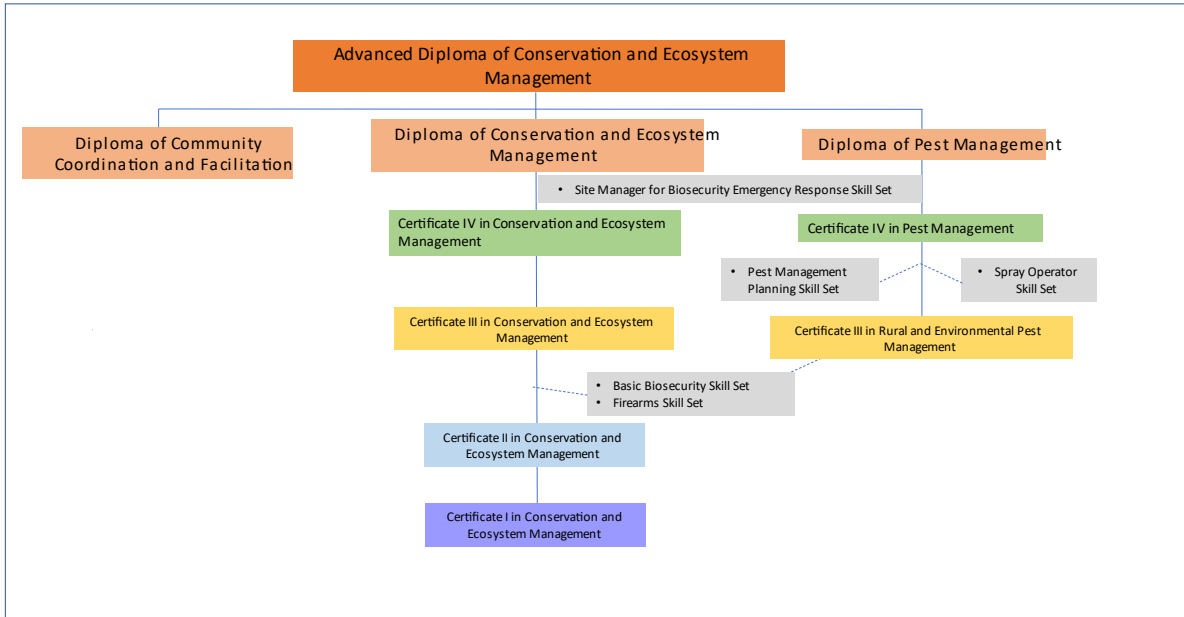

Progression between qualifications

Qualifications have been designed to provide clear pathways for learners. The following diagrams show potential pathways into and from qualifications and where skill sets sit in this context. Please note: the diagrams are intended as examples only and variations between qualifications and skill sets can occur.

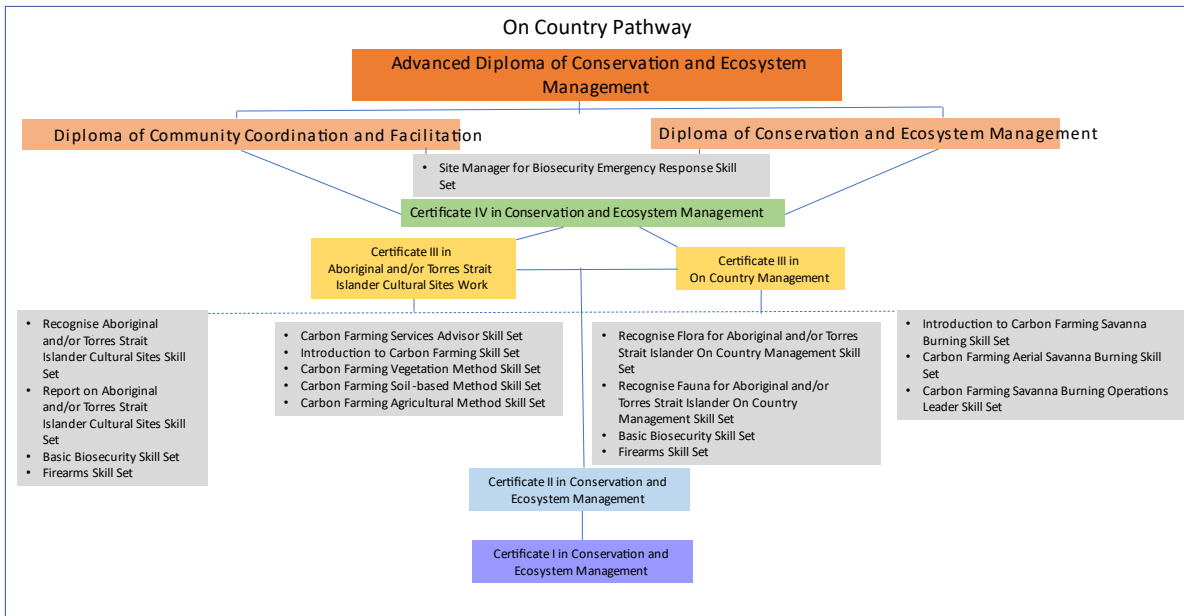

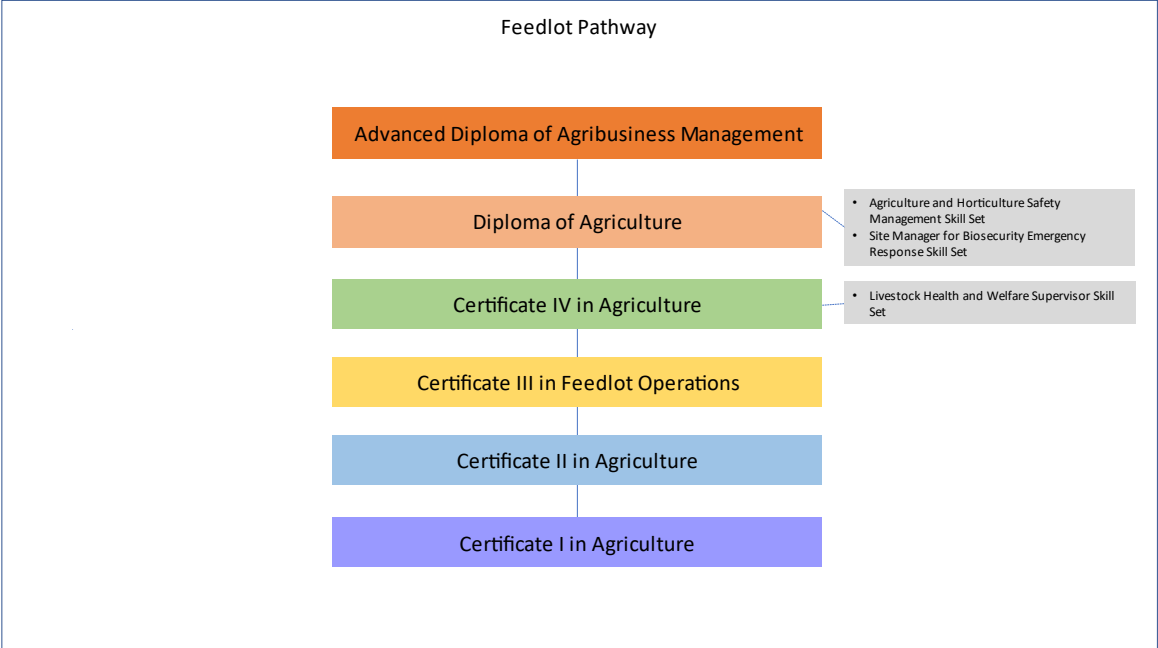

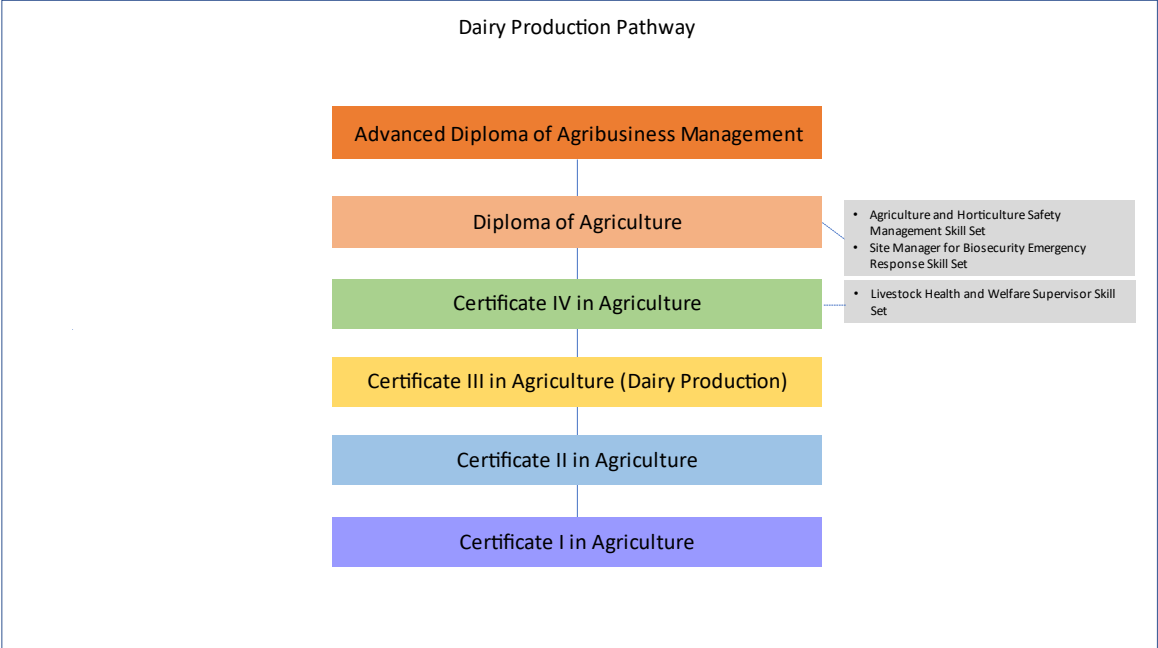

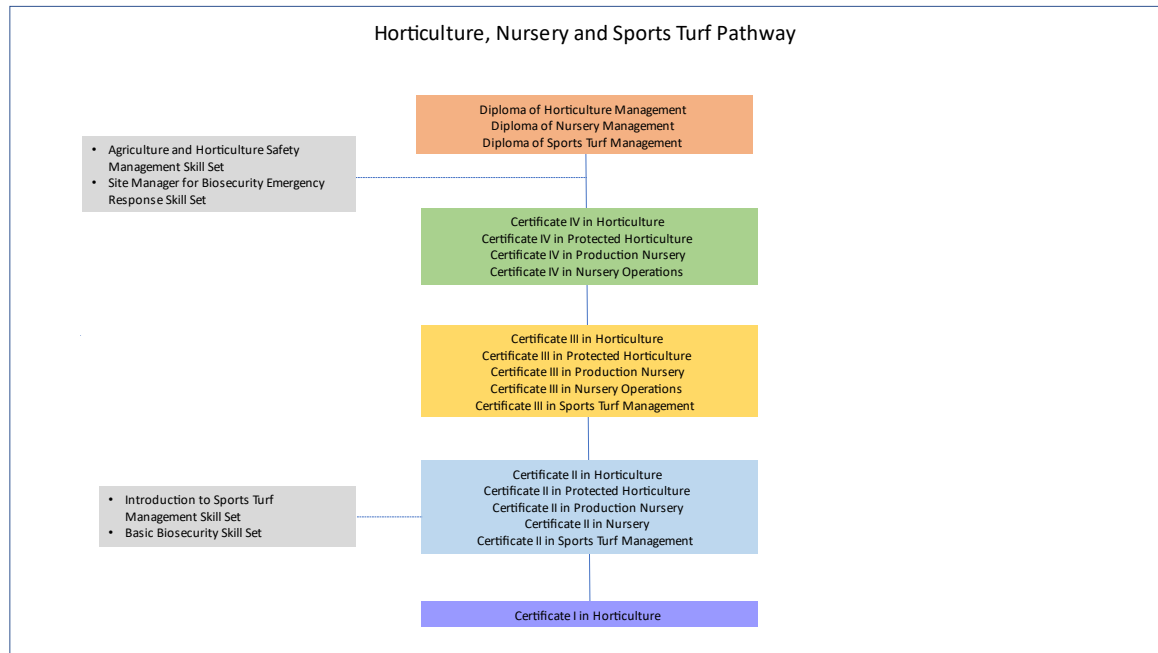

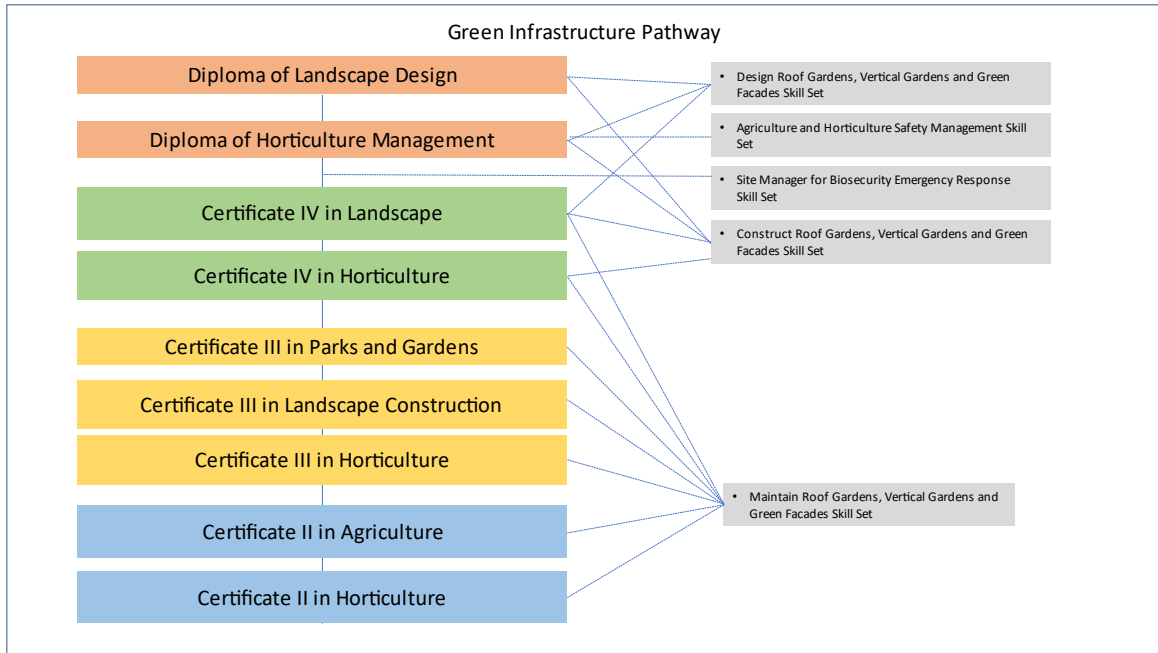

Conservation and Land Management Pathway

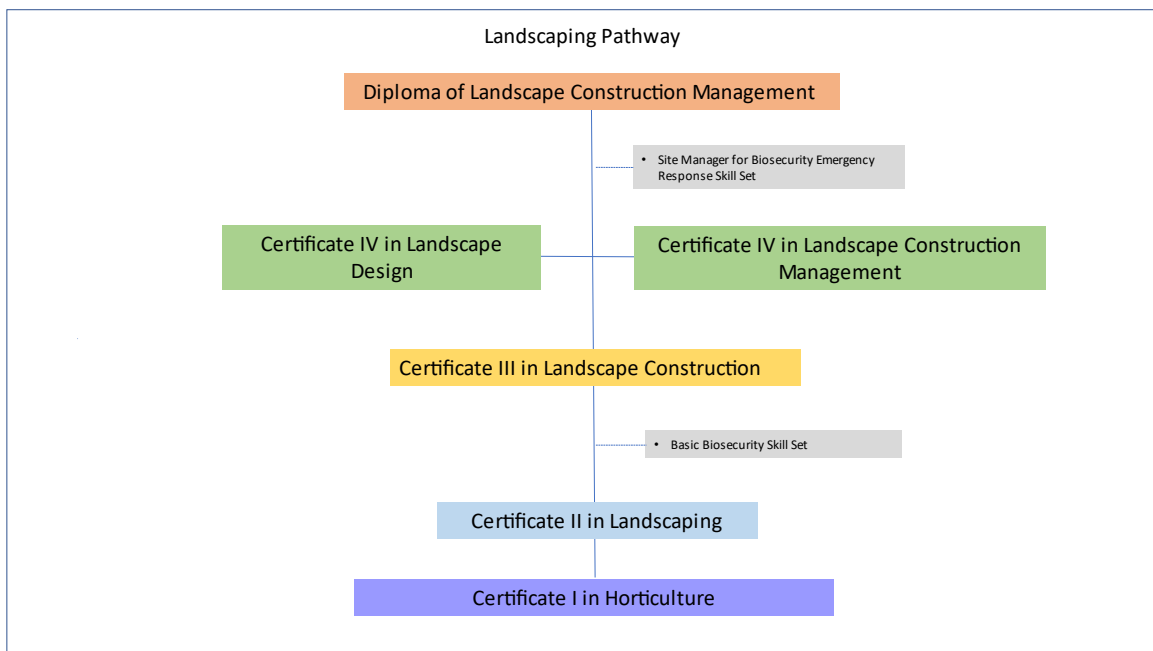

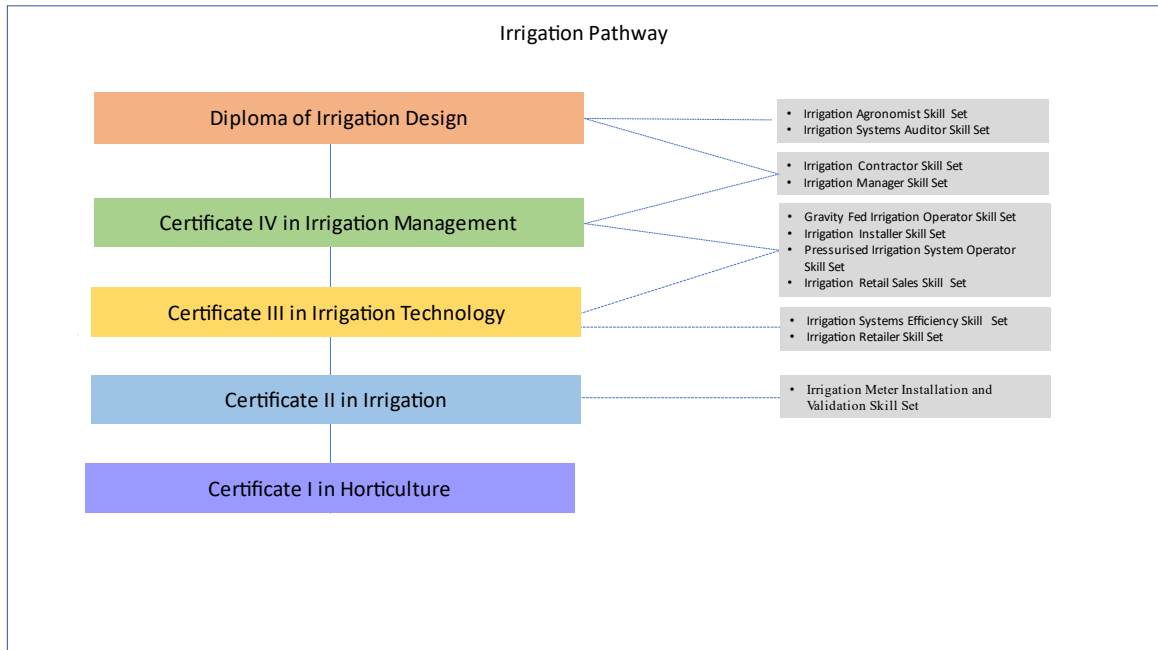

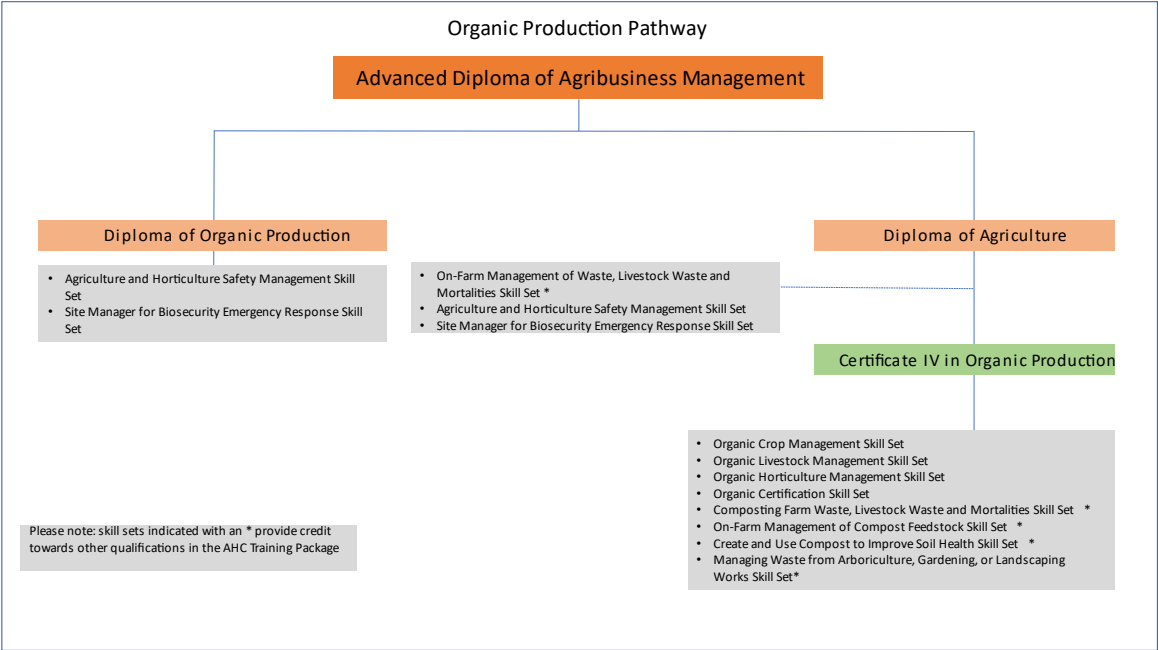

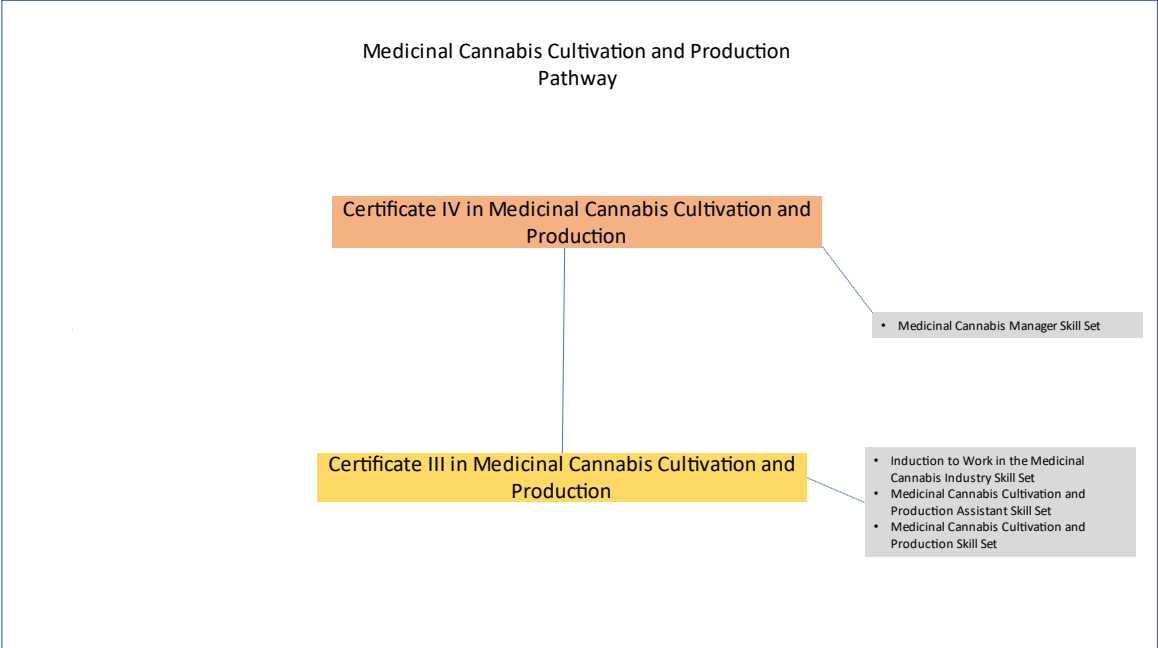

On Country Pathway

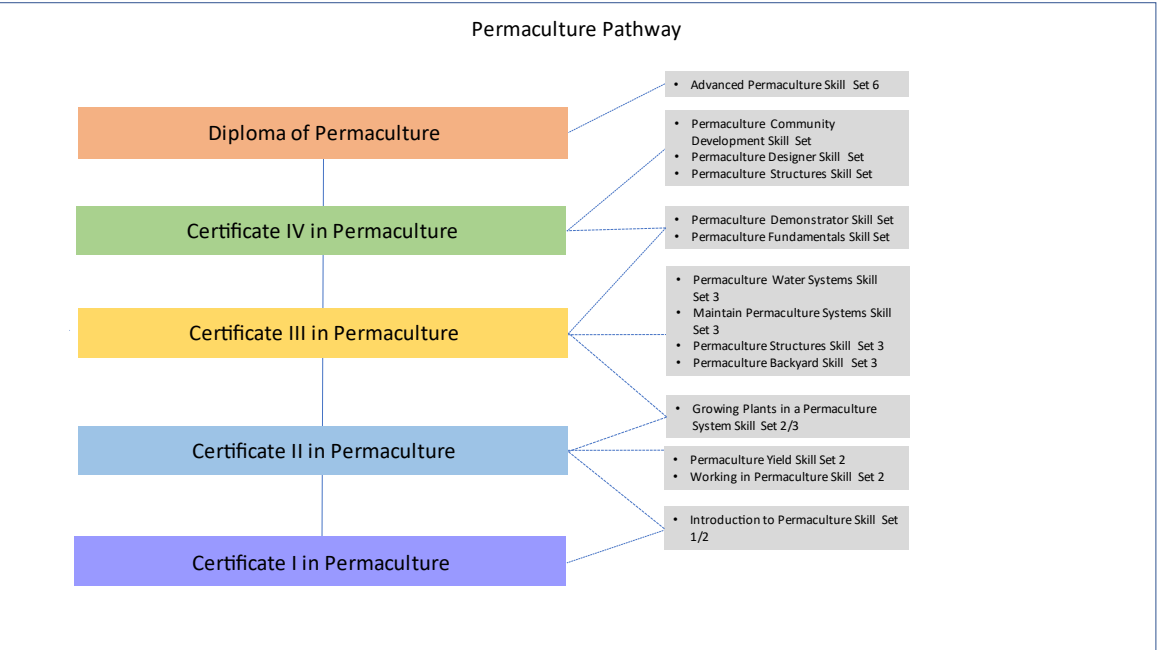

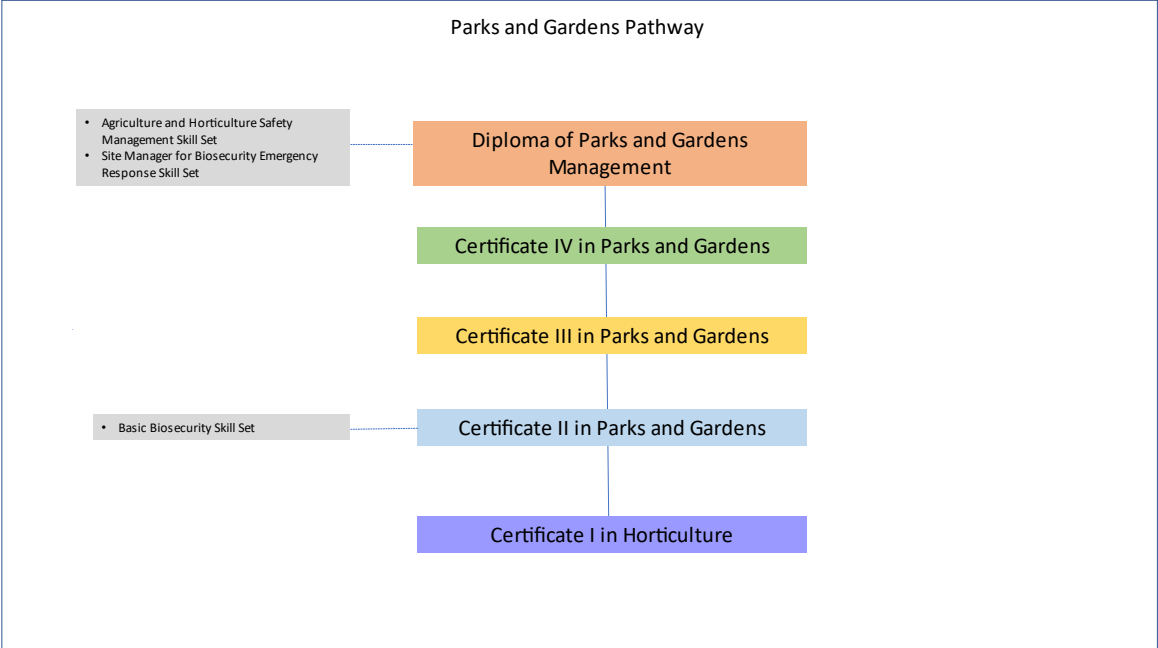

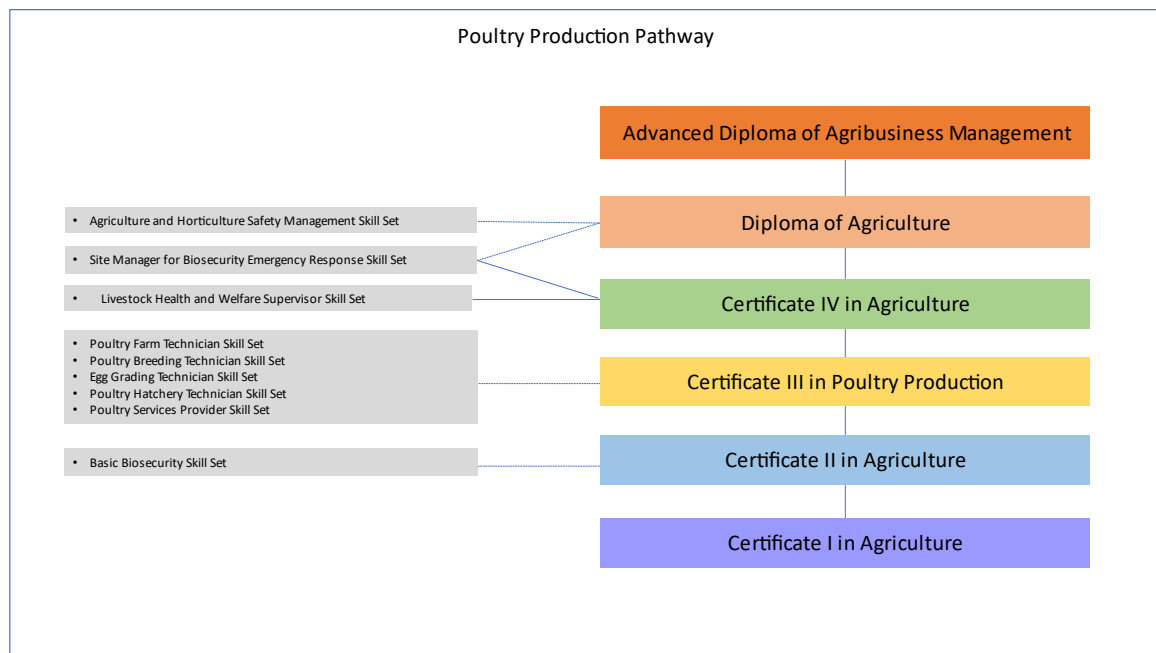

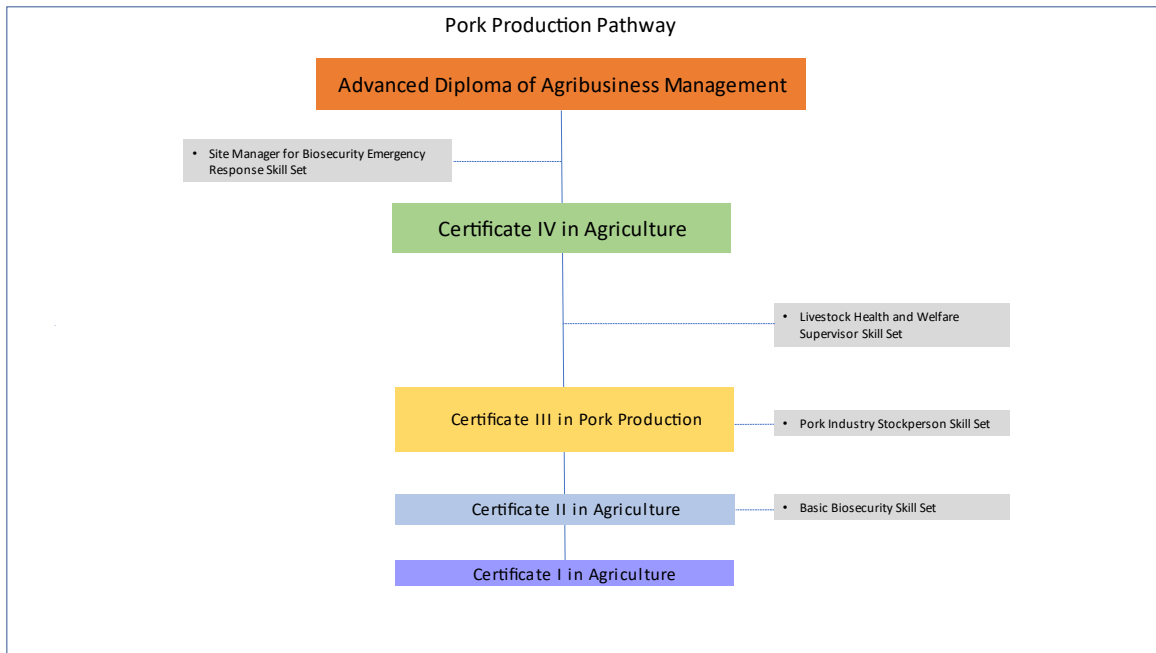

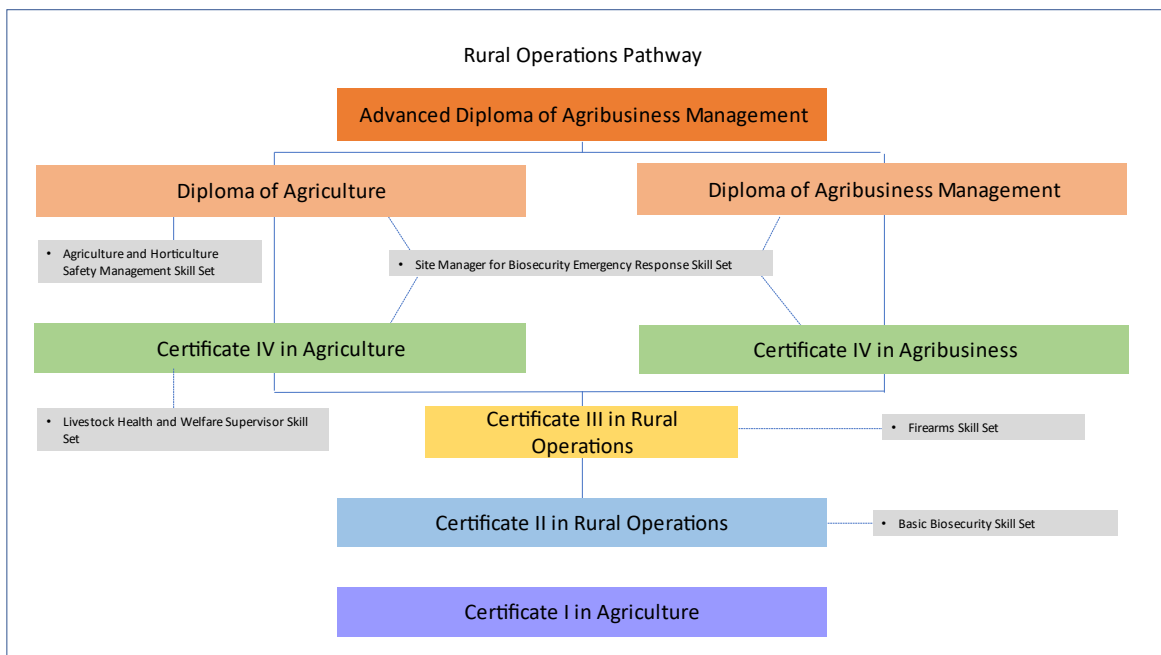

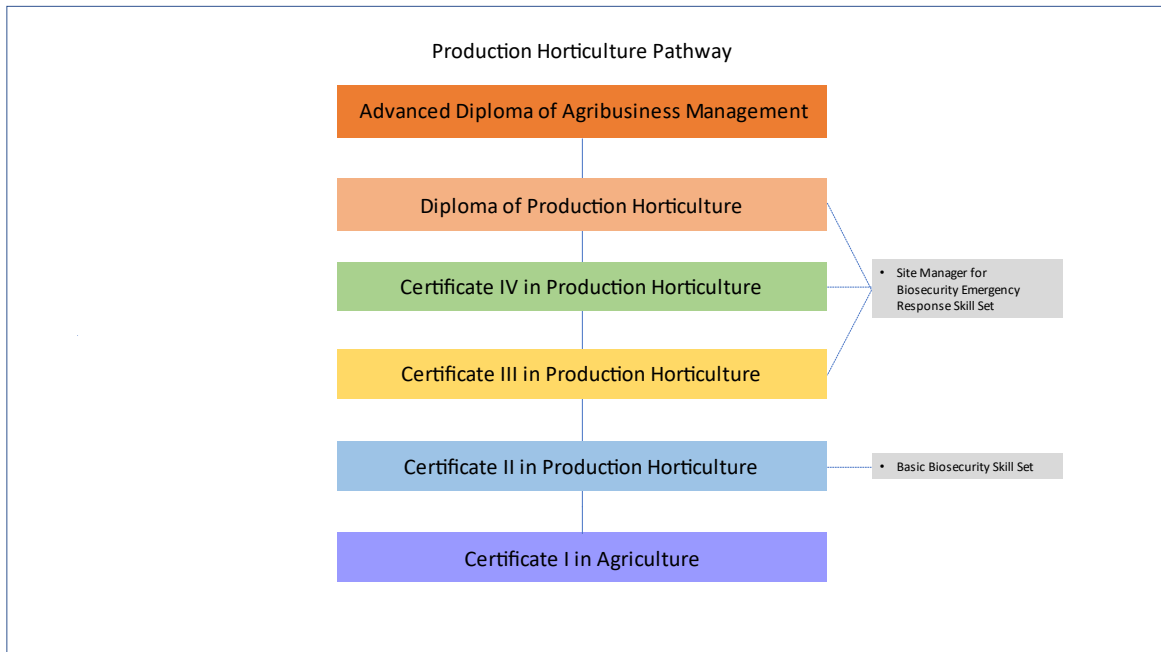

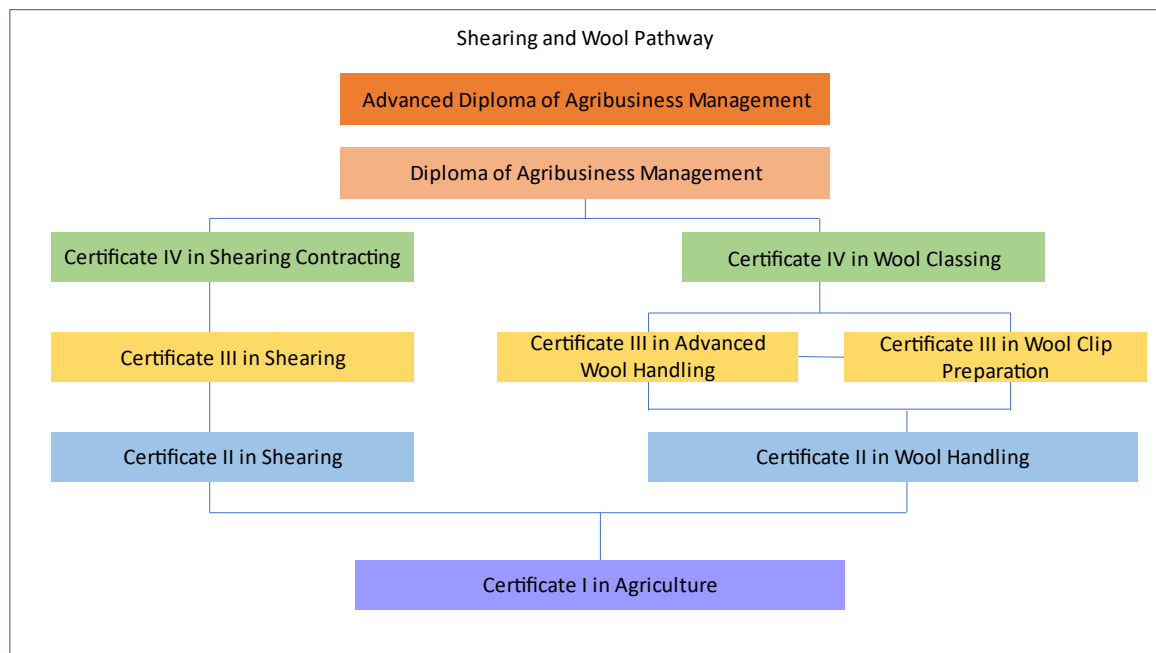

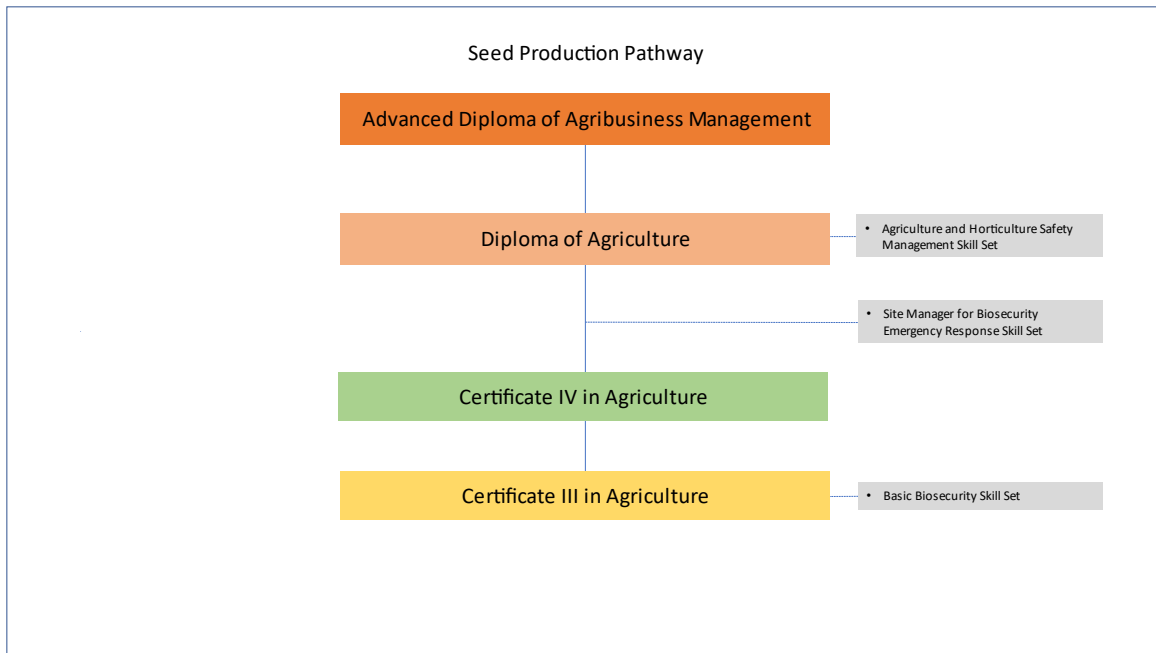

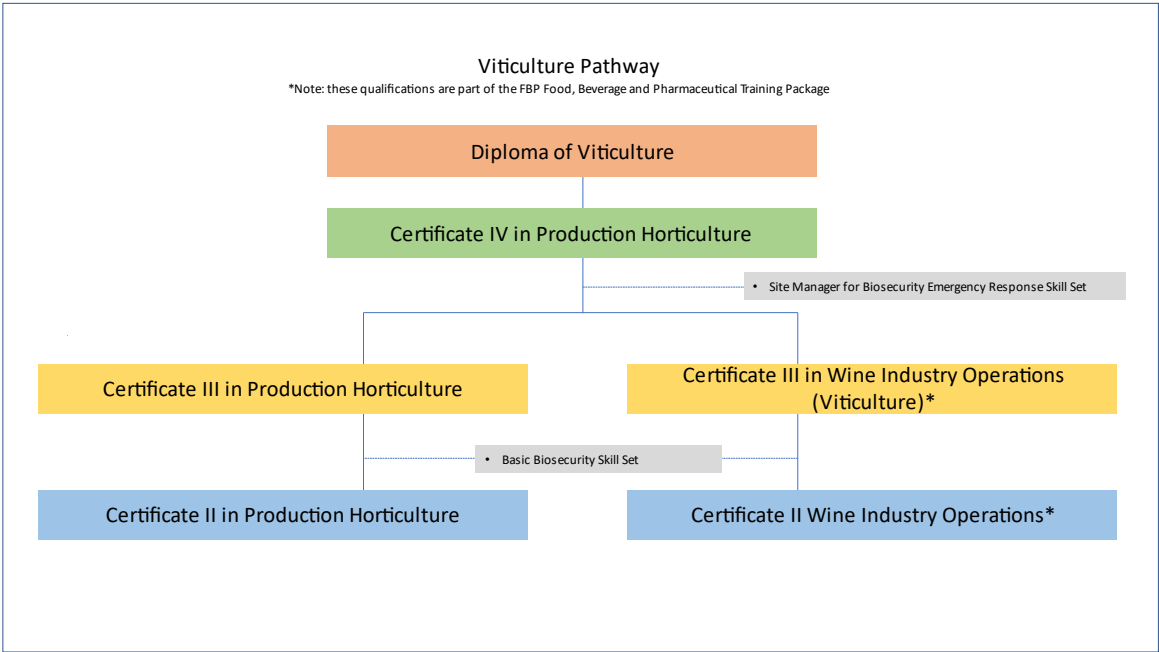

Entry requirements for qualifications

Any specific entry requirements for qualifications in the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* are included in each qualification. The entry requirements ensure an individual has the skills and knowledge required to undertake the qualification.

Qualification Code and Title	Entry Requirements
AHC32916 Certificate III in Shearing	Industry requirements for participation in <i>Certificate III in Shearing</i> is to demonstrate shearing skills and knowledge at <i>Certificate II in Shearing</i> level.
AHC51019 Diploma of Sports Turf Management	To commence this qualification an individual must have: <ul style="list-style-type: none"> completed a Certificate III in Sports Turf Management or an equivalent turf management trade level qualification or a certificate III level qualification in amenity horticulture combined with two years current work experience in a trade level role at a sports turf facility.
AHC50520 Diploma of Arboriculture	To commence this qualification an individual must have achieved the following units of competency or their equivalent: <ul style="list-style-type: none"> AHCARB314 Implement a tree maintenance program AHCARB316 Perform pruning operations AHCARB323 Identify trees.
AHC60520 Advanced Diploma of Arboriculture	Prior to commencing the qualification, an individual must have: <ul style="list-style-type: none"> a diploma of arboriculture or a diploma or higher qualification in a field related to arboriculture* plus 2 years current work experience as a consulting arborist or a municipal tree manager.
AHC80120 Graduate Diploma of Arboriculture	Prior to commencing the qualification, an individual must have: <ul style="list-style-type: none"> an advanced diploma of arboriculture or an advanced diploma or higher qualification in a field related to arboriculture* plus 3 years current work experience as a consulting arborist or a municipal tree manager.
AHC40620 Certificate IV in Nursery Operations	To commence this qualification, individuals must demonstrate they have skills and knowledge in the application of: <ul style="list-style-type: none"> cultivating, growing and harvesting/production skills for a variety of plant types, including pest and disease control technology and equipment that apply in a production nursery or retail nursery workplace health and safety, pest management and biosecurity processes and regulations that apply in a production nursery or retail nursery workplace <p>The skills and knowledge may have been acquired through completion of a Certificate III or higher qualification relating to nursery or horticulture, or industry experience.</p>
AHC50422 Diploma of Horticulture Management	Prior to commencing this qualification an individual must:

	<ul style="list-style-type: none"> • have completed the following units of competency (or equivalent): <ul style="list-style-type: none"> • AHCCHM304 Transport and store chemicals • AHCCHM307 Prepare and apply chemicals to control pest, weeds and diseases • AHCP308 Identify and select plants • AHCPMG301 Control weeds • AHCPMG302 Control plant pests, diseases and disorders • AHCSOL304 Implement soil improvements for garden and turf areas • AHCWHS302 Contribute to workplace health and safety processes <p>OR</p> <p>have relevant equivalent skills and knowledge acquired through participation in the horticulture industry.</p>
AHC50820 Diploma of Nursery Management	<p>To commence this qualification, individuals must demonstrate they have skills and knowledge in the application of:</p> <ul style="list-style-type: none"> • cultivating, growing and harvesting/production skills for a variety of plant types, including pest and disease control • technology and equipment that apply in a production nursery or retail nursery workplace • health and safety, pest management and biosecurity processes and regulations that apply in a production nursery or retail nursery workplace • The skills and knowledge may have been acquired through completion of a Certificate III or higher qualification relating to nursery or horticulture, or industry experience.

Entry requirements for the post trade qualifications in Arboriculture

Diploma of Arboriculture

The entry requirements for *AHC50520 Diploma of Arboriculture* are three units from the Certificate III that provide a foundation of arborist skills and knowledge. The entry requirement has been added to ensure that prospective learners can successfully complete the Diploma. Industry experts advised that individuals must have attained enough practical tree skills and knowledge for them to be able to provide sound advice when employed as a Consultant or Tree Manager. This concern was also reflected in the Case for Change that states “arborists are not regulated, and so certified companies are losing business to inadequately qualified traders, whose lack of knowledge undermines the industry and can be harmful to trees, plants and the wider environment.”

The industry is keen to attract people from related sectors such as Amenity Horticulture and Forestry, and industry experts warned of the dangers of allowing people without sufficient tree care experience to complete a Diploma and become self-employed consultants. The experts agreed that the following entry requirement would be sufficient to provide a sound foundation of arborist skills and knowledge prior to commencing the revised Diploma:

To commence this qualification an individual must have achieved the following units of competency or their equivalent:

- *AHCARB314 Implement a tree maintenance program*
- *AHCARB316 Perform pruning operations*
- *AHCARB323 Identify trees.*

It should be noted that the three units above are in the core of the revised Certificate III and have also been packaged in to the new *AHCSS00104 Introduction to Arboriculture Skill Set*. People undertaking this skill set from non-arboriculture backgrounds may choose to enrol in the Diploma or decide to complete the Certificate III prior to embarking on the Diploma. Whichever pathway an individual decides to take, industry will have the confidence that these individuals have the necessary skills and experience to be competent consultants or tree managers.

Advanced Diploma of Arboriculture and Graduate Diploma of Arboriculture

These qualifications build on specialist skills and knowledge acquired through learning and experience from working in the arboriculture industry. Without this knowledge and experience the prospective student would not have sufficient understanding of the complexities of arboriculture work to complete this qualification.

As of July 2019, there have been no enrolments in the existing *AHC60516 Advanced Diploma of Arboriculture* and *AHC80116 Graduate Diploma of Arboriculture* since their release in 2016, largely due to the restrictive structure and rigid wording of the entry requirement in each qualification. Industry experts advised that industry practitioners have expressed a need for these qualifications. For example, the University of Melbourne offers a Graduate Certificate in Arboriculture that has been running successfully for almost a decade, with at least 35 enrolments per year. In comparison to the AHC level 6 and 8 arboriculture qualifications, the entry requirements for the university's Graduate Certificate in Arboriculture are very flexible.

Therefore, a major change to the revised Advanced Diploma of Arboriculture and Graduate Diploma of Arboriculture has been to make the entry requirements more flexible. As advised by the industry experts, the entry requirements for the revised Advanced Diploma are:

- a diploma of arboriculture
or
- a diploma or higher qualification in a field related to arboriculture plus 2 years current work experience as a consulting arborist or a municipal tree manager.

As advised by the SMEs, the entry requirements for the revised Graduate Diploma are:

- an advanced diploma of arboriculture
or
- an advanced diploma or higher qualification in a field related to arboriculture plus 3 years current work experience as a consulting arborist or a municipal tree manager.

*** A field related to arboriculture**, for the purpose of the entry requirements of both qualifications, includes, but is not limited to: agronomy, arboriculture, biology, biomechanics, botany, conservation and land management, ecology, economics, engineering, entomology, environmental science, forestry, landscape architecture, mycology and soil science.

Entry requirements for the Diploma of Sports Turf Management

The Sports turf industry is a specialised sector of the Horticulture industry. Prior to commencing the Diploma, industry expects individuals to possess practical understanding of working safely with sports turf machinery, tools and equipment, as well as experience in the application of the science of horticulture at a technical level for growing and maintaining sports turf. This prior knowledge and experience will help ensure individuals enrolling in the Diploma are able to transition and extend these applied skills and knowledge into the effective design and development of sports turf management activities.

In recognition of various pathways to competence, the entry requirements in AHC51019 Diploma of Sports Turf Management have been relaxed to allow entry to individuals with “a certificate III level qualification in amenity horticulture combined with two years current work experience in a trade level role at a sports turf facility”.

The following qualifications do not have entry requirements but do have recommendations:

Qualification Code and Title	Entry Requirements
Certificate III in Cultural Sites Work	It is recommended that applicants should seek the endorsement of their local Aboriginal and/or Torres Strait Islander Community and local Aboriginal and/or Torres Strait Islander leadership when enrolling in this Qualification
Certificate III in Seed Testing	It is recommended that applicants should be working under supervision in a seed testing laboratory

Entry requirements for the Certificate IV in Nursery Operations

The job roles for this qualification require an individual to be able to provide technical support and supervise technical staff. This requires the individual to have underpinning technical skills in order to successfully undertake the qualification. As such it is critical that an individual has the skills and knowledge in the application of:

- • cultivating, growing and harvesting/production skills for a variety of plant types, including pest and disease control
- • technology and equipment that apply in a production nursery or retail nursery workplace
- • health and safety, pest management and biosecurity processes and regulations that apply in a production nursery or retail nursery workplace

The skills and knowledge may have been acquired through completion of a Certificate III or higher qualification relating to nursery or horticulture, or industry experience.

Entry requirements for the Diploma of Horticulture Management

The job roles for this qualification require an individual to be able to provide technical support and manage technical staff. This requires the individual to have underpinning technical skills in order to successfully undertake the qualification. As such it is critical that an individual has either completed the listed units of competency or have relevant equivalent skills and knowledge acquired through participation in the horticulture industry.

Entry requirements for the Diploma of Nursery Management

The job roles for this qualification require an individual to be able to provide technical support and manage technical staff. This requires the individual to have underpinning technical skills in order to successfully undertake the qualification. As such it is critical that an individual has the skills and knowledge in the application of:

- • cultivating, growing and harvesting/production skills for a variety of plant types, including pest and disease control
- • technology and equipment that apply in a production nursery or retail nursery workplace
- • health and safety, pest management and biosecurity processes and regulations that apply in a production nursery or retail nursery workplace

The skills and knowledge may have been acquired through completion of a Certificate III or higher qualification relating to nursery or horticulture, or industry experience.

Selecting electives to enable different occupational outcomes

Qualifications include elective units that should be selected according to the needs of the learner. The choice of elective units may be negotiated between the learner and/or employer, and the RTO conducting the training program.

Some qualifications allow electives to be selected from within the training package, and also from other training packages and accredited courses. Wherever they are selected from, elective units should provide a vocational focus for the qualification and be relevant to the:

- AQF qualification level
- job role
- work outcomes
- local industry needs
- area of specialisation (if required).

Choosing electives

Electives should be chosen through collaboration with the learner, the RTO and the employer to suit current or future employment needs. The packaging rules must always be followed, but within the rules there may be flexibility to choose electives from beyond the electives listed and outside of the qualification and the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package*. However, the electives chosen must always be relevant to the overall vocational outcome of the qualification, and unless it is stated otherwise, it is possible to select units with an AQF identifier within one AQF level, up or down, of the qualification being undertaken.

Mandatory electives

The following qualifications do not have specialisations, however, to ensure the relevance and integrity of the qualifications, mandatory electives have been identified and grouped. They are as follows:

Qualification	Mandatory elective choices
AHC31522 Certificate III in Aboriginal and/or Torres Strait Islander Cultural Sites Work	<p>An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification.</p> <p>4 units must be selected from Group A Cultural Sites Work</p> <ul style="list-style-type: none"> • AHCCSW302 * Relate Aboriginal and/or Torres Strait Islander culture to sites work • AHCCSW303 * Identify and record sites, objects and cultural landscapes on Country • AHCCSW304 * Identify Aboriginal and/or Torres Strait Islander culturally significant plants • AHCCSW305 * Work with Aboriginal and/or Torres Strait Islander ceremonial and sacred materials • AHCCSW306 * Use technology in Aboriginal and/or Torres Strait Islander sites work • AHCCSW307 * Support the documentation of Aboriginal and/or Torres Strait Islander cultural landscapes • AHCCSW308 * Apply cultural significance to Aboriginal and/or Torres Strait Islander sites and landscapes • AHCCSW309 * Interpret Aboriginal and/or Torres Strait Islander cultural landscapes • AHCCSW310 * Move and store Aboriginal and/or Torres Strait Islander cultural material • AHCCSW311 * Maintain an Aboriginal and/or Torres Strait Islander cultural site

	<ul style="list-style-type: none"> • AHCCSW312 Apply knowledge of relevant legislation to Aboriginal and/or Torres Strait Islander sites work • AHCCSW401 Contribute to the development of cultural safety processes
AHC32522 Certificate III in On Country Management	<p>An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification.</p> <p>4 units must be selected from Group A On Country Management</p> <ul style="list-style-type: none"> • AHCOCM201 Maintain cultural sites • AHCOCM202 Observe and report plants or animals • AHCOCM203 Record information about Country • AHCOCM301 Provide information on Aboriginal and/or Torres Strait Islander Peoples' cultural practice • AHCOCM302 * Work with an Aboriginal and/or Torres Strait Islander Community or organisation • AHCOCM304 * Implement cultural burning practices on Country • AHCOCM305 Identify traditional customs and land rights for an Aboriginal and/or Torres Strait Islander Community • AHCOCM401 Protect places of cultural significance • AHCOCM402 Report on place of potential cultural significance • AHCOCM403 Contribute to a proposal for a negotiated outcome related to Country • AHCOCM404 Record and document Aboriginal and/or Torres Strait Islander Community history • AHCOCM405 Develop work practices to accommodate cultural identity

Mandatory requirements for specialisations

Some qualifications in the *Agriculture, Horticulture and Conservation and Land Management Training Package* have been designed to allow specialisations. The area of specialisation can be included on a testamur to certify attainment of an AQF qualification as shown in the example.

<p>This is to certify that</p> <p>John Smith</p> <p>has fulfilled the requirements for</p> <p>AHC30318 Certificate III in Rural and Environmental Pest Management</p> <p>(Weed Controller)</p>
--

Choosing electives for specialisations

Qualification	Specialisation	Mandatory elective choices
AHC30318 Certificate III in Rural and Environmental Pest Management	Pest animal controller	<ul style="list-style-type: none"> ▪ AHCFUA201 Recognise fauna ▪ AHCPMG304 Use firearms to humanely destroy animals

Qualification	Specialisation	Mandatory elective choices
		<ul style="list-style-type: none"> ▪ AHCPMG307 Apply animal trapping techniques ▪ AHCPMG309 Apply pest animal control techniques ▪ AHCPMG312 Apply poison baits for vertebrate pest control in rural and environmental landscapes, plus, ▪ 1 unit from elective groups C or E, plus, ▪ 2 units from electives in groups C and E or any currently endorsed Training Package or accredited course packaged at Certificate II, III or IV
AHC30318 Certificate III in Rural and Environmental Pest Management	Weed Controller	<ul style="list-style-type: none"> ▪ AHCPMG303 Identify plant specimens ▪ AHCPMG301 Control weeds ▪ AHCBIO201 Inspect and clean machinery for plant, animal and soil material, plus, ▪ 3 units must be selected from the elective group D or E, plus, ▪ 2 units must be selected from remaining group D or E or any currently endorsed Training Package or accredited course packaged at Certificate II, III or IV
AHC30522 Certificate III in Poultry Production	Poultry farm technician	<ul style="list-style-type: none"> ▪ AHCPLY303 Maintain health and welfare of poultry ▪ AHCPLY311 Clean and disinfect poultry production sheds <p>Plus at least 2 of the following:</p> <ul style="list-style-type: none"> ▪ AHCLSK304 Carry out post-mortem examination of livestock ▪ AHCLSK307 Euthanase livestock ▪ AHCLSK310 Implement feeding plans for intensive production

Qualification	Specialisation	Mandatory elective choices
		<ul style="list-style-type: none"> ▪ AHCLSK313 Monitor livestock production growing environments ▪ AHCPY210 Catch and load poultry ▪ AHCPY309 Brood poultry ▪ AHCPMG308 Implement pest management strategies
	Poultry breeding technician	<ul style="list-style-type: none"> ▪ AHCLSK313 Monitor livestock production growing environments ▪ AHCPY210 Catch and load poultry ▪ AHCPY211 Collect store and handle eggs from breeder flocks ▪ AHCPY303 Maintain health and welfare of poultry <p>Plus at least 1 of the following:</p> <ul style="list-style-type: none"> ▪ AHCAIS304 Artificially inseminate livestock ▪ AHCLSK304 Carry out post-mortem examination of livestock ▪ AHCLSK307 Euthanase livestock ▪ AHCPY209 Grade and pack eggs for human consumption ▪ AHCPY309 Brood poultry ▪ AHCPY311 Clean and disinfect poultry production sheds ▪ AHCPMG308 Implement pest management strategies
	Egg grading technician	<ul style="list-style-type: none"> ▪ AHCPY209 Grade and pack eggs for human consumption ▪ FBPEGG2004 Operate egg grading and packing floor equipment ▪ FBPFYSY2002 Apply food safety procedures
	Poultry services provider	<ul style="list-style-type: none"> ▪ AHCCHM304 Transport and store chemicals ▪ AHCCHM307 Prepare and apply chemicals to control pest, weeds and diseases

Qualification	Specialisation	Mandatory elective choices
		<ul style="list-style-type: none"> ▪ AHCPY210 Catch and load poultry ▪ AHCPY311 Clean and disinfect poultry production sheds <p>Plus at least 1 of the following:</p> <ul style="list-style-type: none"> ▪ AHCLSK301 Administer medication to livestock ▪ AHCAIS304 Artificially inseminate livestock ▪ AHCLSK307 Euthanase livestock ▪ AHCPMG409 Implement a pest management plan ▪ AHCPMG412 Develop a pest management plan ▪ BSBWHS411 Implement and monitor WHS policies, procedures and programs ▪ BSBWHS431 Develop processes and procedures for controlling hazardous chemicals in the workplace ▪
	Hatchery Technician	<ul style="list-style-type: none"> ▪ AHCPY210 Catch and load poultry ▪ AHCPY303 Maintain health and welfare of poultry ▪ AHCLSK307 Euthanase livestock ▪ AHCPY310 Incubate eggs <p>Plus at least 1 of the following:</p> <ul style="list-style-type: none"> ▪ AHCCHM304 Transport and store chemicals ▪ AHCCHM307 Prepare and apply chemicals to control pest, weeds and diseases ▪ AHCLSK304 Carry out post-mortem examination of livestock ▪ AHCLSK301 Administer medication to livestock ▪ AHCPY309 Brood poultry ▪ AHCPMG308 Implement pest management strategies

		<ul style="list-style-type: none"> ▪ AHCORG507 Develop an organic or biodynamic management plan ▪ AHCORG509 Prepare and manage organic or biodynamic certification

Training package delivery and assessment

RTOs must ensure that both training and assessment complies with the relevant standards¹¹. In general terms, training and assessment must be conducted by individuals who:

- have the necessary training and assessment competencies
- have the relevant vocational competencies at least to the level being delivered or assessed
- can demonstrate current industry skills directly relevant to the training/assessment being delivered
- continue to develop their VET knowledge and skills, industry currency and trainer/assessor competence.

Assessors of some units of competency may have to meet requirements in addition to those of the *Standards for Registered Training Organisations (RTOs) 2015/AQTF* requirements for assessors.

Check the *Assessment Conditions* section (provided in the assessment requirements that accompany each unit of competency) for specific assessor requirements.

Some specific considerations in relation to the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* are summarised below

Amount of training and volume of learning

RTOs must create a training and assessment strategy for delivery of AQF qualifications that reflects the complexity required of that qualification. An essential consideration in the training and assessment strategy is to ensure the amount of training provided is sufficient so that the learner can:

- meet the requirements of each qualification
- gain the skills and knowledge specified in the units of competency.

The amount of training involves all the formal learning activities provided to a learner, for example, classes, tutorials, field-work, lectures, online or self-paced study, as well as workplace learning.

¹¹ RTOs regulated by Australian Skills Quality Authority (ASQA) must comply with the Standards for Registered Training Organisations (RTOs) 2015. RTOs regulated by the Western Australian Training Accreditation Council (WA TAC) or the Victorian Registration and Qualifications Authority (VRQA) must check with their regulator for current requirements.

Training should take into account the need to allow learners to reflect on and absorb the knowledge, to practise the skills in different contexts and to learn to apply the skills and knowledge in the varied environments that the 'real world' offers before being assessed.

AQF qualifications differ in terms of their complexity. The complexity of a qualification is defined by:

- the breadth and depth of the knowledge
- skills required
- application of knowledge and skills, and
- the AQF volume of learning.

The AQF volume of learning describes how long a learner, without any competencies identified in the qualification, would normally take to develop all the required skills and knowledge at that qualification level. The volume of learning includes all teaching, learning and assessment activities that are undertaken by the typical student to achieve the learning outcomes of the particular qualification.¹²

Access and equity considerations

Training and assessment practices should minimise any barriers to training and assessment by considering the individual needs of learners. Some needs that could affect an individual's participation in training and assessment include:

- age
- gender
- cultural or ethnic background
- disability
- sexuality
- language, literacy or numeracy skills
- employment status
- geographical location.

While the design and content of this training package supports equitable access and progression for all learners, it is the responsibility of the RTO delivering and assessing qualifications to:

- ensure that training and assessment processes and methods do not disadvantage individual learners
- determine the needs of individual learners and to provide access to any educational and support services necessary.

Some practical ways that access and equity issues could be addressed include:

- modifying assessment processes for learners who are located at a distance from a campus location
- checking that materials are culturally appropriate for learners and amending, as necessary
- making sure that activities and assessments are suitable for the language, literacy and numeracy skill levels of learners (while meeting the requirements of the unit of competency).

Reasonable adjustment for learners with disabilities

A legislative framework underpins and supports the delivery of vocational education and training across Australia. Under this framework, RTOs must take steps to provide enrolled learners with recognised disabilities access to same training as learners without disabilities.

¹² Information sourced from Australian Government, ASQA, *Fact Sheet: Determining the amount of training*, <<https://www.asqa.gov.au/news-publications/publications/fact-sheets/amount-training>> viewed April 2018:

In some cases, 'reasonable adjustments' are made to the training environment, training delivery, learning resources and/or assessment tasks to meet the needs of a learner with a disability. An adjustment is 'reasonable' if it can accommodate the learner's particular needs, while also taking into account factors such as:

- the views of the learner
- the potential effects of the adjustment on the learner and others
- the costs and benefits of making the adjustment to the RTO.

Adjustments must:

- be discussed and agreed to by the learner with a disability
- benefit the learner with a disability
- maintain the competency standards
- be reasonable to expect in a workplace.¹³

¹³ The *Disability Standards for Education, 2005* and accompanying guidance notes can be downloaded at <http://education.gov.au/disability-standards-education>.

Foundation skills in units of competency

Foundation skills are the 'non-technical skills' that individuals need so they can participate effectively in workplaces, in education and training, and in their communities.

Under the *Standards for Training Packages 2012*, training package developers must include foundation skills in units of competency, however, the method and format for doing this has not been prescribed.

In the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package* (and all training packages developed by Skills Impact) the foundation skills are shown in a table format as shown in the following example.

Foundation Skills	
<i>This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.</i>	
Skill	Description
Reading	<ul style="list-style-type: none">▪ Interpret information in workplace procedures and legislative documents
Writing	<ul style="list-style-type: none">▪ Record data and observations about livestock in workplace forms accurately and legibly
Oral communication	<ul style="list-style-type: none">▪ Use open and closed questions to gather information▪ Interpret verbal and non-verbal communication
Numeracy	<ul style="list-style-type: none">▪ Make calculations, including distance, area, volume and ratio

Frameworks used

The foundation skills are derived from two national frameworks:

- The *Australian Core Skills Framework* (ACSF) is used to identify learning, language, literacy and numeracy (LLN) skills.
- The *Core Skills for Work Developmental Framework* (CSfW) is used to identify employability/employment skills.

The skills included in these two frameworks are summarised in the table below.

ACSF	CSfW	
Skills	Skills clusters	Skills or focus area
<ul style="list-style-type: none"> ▪ Learning ▪ Reading ▪ Writing ▪ Oral Communication ▪ Numeracy 	Navigate the world of work	<ul style="list-style-type: none"> ▪ Managing one's own career and work life ▪ Understanding one's own work role, and the associated rights and obligations
	Interact with others	<ul style="list-style-type: none"> ▪ Communicating in the workplace ▪ Connecting and working with others ▪ Recognising, respecting and using diverse perspectives
	Get the work done	<ul style="list-style-type: none"> ▪ Planning and organising workplace tasks ▪ Making decisions ▪ Identifying and solving problems ▪ Being creative and innovate ▪ Working with digital systems/technologies

The five skills from the ACSF are identified separately with descriptions explaining how the skill underpins the performance criteria. The three skill clusters from the CSfW are identified with descriptions explaining how the respective skill or focus area(s) underpin the performance criteria.

The foundation skills table in each unit:

- identifies applicable underpinning skills
- describes the application of each skill in the context of the performance criteria.

Only those foundation skills that **ARE NOT** explicit in the performance criteria appear in the foundation skills mapping table.

The foundation skills are an integrated part of the unit for training and assessment purposes. Therefore, it is important that users look closely at both the foundation skills and the performance criteria, to make sure that **all** foundation skills are considered during delivery and assessment.

Key legislative implications for implementation

Regulatory or licensing requirements are identified in the *Application* field of units of competency and the *Qualification description* field in qualifications. If there are no particular requirements, then the statement 'No occupational licensing, legislative or certification requirements apply to this unit/qualification at the time of publication' will appear.

Health and safety requirements

In general, health and safety requirements are addressed in specific work health and safety units of competency or embedded in particular units of competency in the *AHC Agriculture, Horticulture and Conservation and Land Management Training Package*.

RTOs must make sure that delivery of health and safety content is contextualised to comply with the relevant legislation in the state/territory in which they are training. Details of state and territory regulators, together with some useful workplace health and safety organisations, have been included in the following tables.

State/Territory Regulators

State/Territory	Regulating Body	Website
Australian Capital Territory	WorkSafe ACT	http://www.worksafe.act.gov.au
New South Wales	SafeWork NSW	http://www.safework.nsw.gov.au
Northern Territory	NT WorkSafe	http://www.worksafe.nt.gov.au
Queensland	Workplace Health and Safety Queensland (WHSQ)	http://www.worksafe.qld.gov.au
South Australia	SafeWork SA	http://www.safework.sa.gov.au
Tasmania	WorkSafe Tasmania	http://worksafe.tas.gov.au
Victoria	WorkSafe Victoria	http://www.worksafe.vic.gov.au
Western Australia	WorkSafe WA	http://www.commerce.wa.gov.au/WorkSafe

National organisations

Name	Function	Website
Safe Work Australia	Leads the development of national policy to improve work health and safety and workers' compensation arrangements across Australia.	http://www.safeworkaustralia.gov.au
Comcare	The Comcare scheme provides rehabilitation and workers' compensation and occupational health and safety arrangements for Australian Government employees and for the employees of organisations which self-insure under the scheme.	http://www.comcare.gov.au
National Industrial Chemicals Notification and Assessment Scheme (NICNAS)	<p>NICNAS is the Australian Government regulator of industrial chemicals. NICNAS is responsible for:</p> <ul style="list-style-type: none"> ▪ providing a national notification and assessment scheme to protect the health of the public, workers and the environment from the harmful effect of industrial chemicals, and ▪ assessing all chemicals new to Australia and those chemicals already used (existing chemicals) on a priority basis, in response to concerns about their safety on health and environmental grounds. 	http://www.nicnas.gov.au

Other legislative requirements

The industry operates under a range of acts, regulations and standards. Following is a summary of key requirements; however, users of this Implementation Guide are advised to check with the relevant regulatory authority as legislation is subject to change.

Industry regulations and standards

Arboriculture

The following statement is included in all the arboriculture qualifications and some arboriculture units of competency; "Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some States and Territories". RTOs should check with the local regulatory bodies before undertaking tree work or tree removal.

The following is an example of a statement contained within the application of one of the arboriculture units of competency whereby; "The arboriculture industry requires that all tree work operations are undertaken according to "preferred industry practices (as outlined in the Companion Volume)."

The industry defines "preferred industry practices" as documented methods or techniques that have been generally accepted as superior to alternatives because they produce outcomes that are more effective while maintaining high standards of safety and care, and as a result, have become a standard way of undertaking work. They will often have undergone a complete current industry validation process and have a system and process in place for regular reviews to be conducted.

One method of ascertaining current best industry practices is to utilise published standards from reputable government and industry sources.

An example of a reputable published standard, which was examined and considered in the drafting of the Arboriculture qualifications and units, is the Minimum Industry Standard produced by the national peak industry body, Arboriculture Australia Ltd. This body has worked with industry organisations and experts in each state and territory to create and maintain current industry best practices, known as Minimum Industry Standards (MIS) for arboriculture industry work tasks and/or processes.

These MIS have been through an industry validation process involving review by subject matter experts and state and territory industry bodies and are an accurate representation of the minimum standard expected for a task. RTOs should ensure that their training and assessment strategies meet or exceed the level described in these standards, and that terminology and practices align with those described in the relevant MIS. These standards are a great educational resource for RTOs to develop training materials. More information is provided about the MIS in the Companion Volume User Guide: Arboriculture.

In addition, numerous Federal, State and Territory bodies publish standards covering arboriculture, and these should be examined at a local level. Safe Work Australia have published the Guide to Managing Risks of Tree Trimming and Removal Work. Some states and territories have bodies that have also published relevant standards. Where appropriate, Australian Standards have been referenced by their code in selected units of competency."

Permaculture

Licensing, legislative or certification requirements may apply to units AHCPER218 Prepare and store products from a permaculture system and AHCPER329 Coordinate preparation and storage of produce from a permaculture system, where handling, processing and distribution of permaculture products are used for human consumption. Users are advised to check with relevant regulatory authority for the units.

Legislation, regulations and by-laws may apply to the units *AHCPER216 Harvest and store seed* and *AHCPER416 Manage a seed bank* for the collection and removal of plant materials from public and private land both nationally and in some states, territories and jurisdictions. Users are advised to check with the local relevant authority for training delivery of these units.

Regulation of genetically modified crops

Genetically modified (GM) crops in Australia, including seeds, are regulated under the *Gene Technology Act 2000* (Cth.) through the Office of the Gene Technology Regulator. The regulatory policy seeks to protect the health and safety of both people and the environment. The regulator identifies risks posed by, or posed as a result of, gene technology, and manages these risks. This Act regulates all dealings with live and viable genetically modified organisms (GMOs) in Australia, including research, manufacture, import, production, propagation, transport and disposal of GMOs. There is also corresponding legislation in each state and territory.

Environmental regulations

Most horticultural production systems are highly reliant on irrigation, fertilisers and pesticides. Laws governing environmental protection and management by horticultural producers include numerous federal, state and local Acts and regulations. Generally, these regulations relate to fertiliser and pesticide supply, handling, usage and storage; disposal of empty chemical containers and contaminated wastes; water usage; wastewater generation and the treatment of waste arising from production; biodiversity; and land and soil management.

National environmental legislation and regulations relevant to the industry include:¹⁴

- *Environment Protection and Biodiversity Conservation Act 1999* (Cth.)
- *Hazardous Waste (Regulation of Exports and Imports) Act 1989* (Cth.)
- *Ozone Protection and Synthetic Greenhouse Gas Management Act 1989* (Cth.)
- *Water Act 2007, Water Amendment Act 2008* (Cth.) and associated water regulations
- National Water Quality Management Strategy
- National Environment Protection (Assessment of Site Contamination) Measure
- Australian and New Zealand Guidelines for Fresh and Marine Water Quality (2000)
- Australian Drinking Water Guidelines (2011)
- Australia New Zealand Food Standards Code
- National Residue Survey
- National Environment Protection (Air Toxics) Measure.

State/territory government agencies regulate water usage via the allocation of water licences and dam management. They also decide on the timing and amount of water able to be accessed by irrigators. Water legislation focuses on developing efficient water usage for agriculture while limiting its environmental effect, particularly in the Murray–Darling Basin, which supports a large proportion of Australia's fruit and vegetable crops.

Food regulations

Food Standards Australia New Zealand (FSANZ) establish standards relevant to the agriculture industry, particularly for poultry, meat, dairy, eggs and egg products, and seed sprout. FSANZ aims to strengthen food safety by reducing the incidence of foodborne illness associated with seed sprouts and eggs or egg products. In addition, dairy standards outline the implementation of documented food safety programs for primary dairy production and for the collection, transportation and processing of raw milk, as designed to protect public health across all jurisdictions.

¹⁴ Horticulture for Tomorrow and Horticulture Australia Limited, 2014, Guidelines for Environmental Assurance in Australian Horticulture, viewed April 2017, <http://horticulturefortomorrow.com.au/manage/wp-content/uploads/2014/05/EnvironmentalAssurance-Guidelines-2014-full-version-2.pdf>.

The majority of fresh horticultural produce in Australia is grown under industry-based food safety schemes.¹⁵ These schemes, and several state/territory regulations and guidelines, work to minimise risks linked to microbiological, chemical and physical factors that may be present in fresh produce for sale in Australia.

State/territory government regulations and guidelines follow.

- The *Food (Plant Products Food Safety Scheme) Regulation (2005)* (NSW) provides specific control measures to manage the safe production and supply of seed sprouts, fresh-cut fruit and vegetables, and juices.
- The *Food Production (Safety) Regulation (2014)* (QLD) sets out requirements for the transport and processing of fresh primary produce.
- The NSW Food Authority's *Industry Guide for the Development of a Food Safety Program (High Priority Plant Products Industry)* (2005) covers seed sprouts, fresh-cut fruits and vegetables, unpasteurised juice, and vegetables in oil.
- *Guidelines for On-Farm Food Safety for Fresh Produce* (2004) was published by the Australian Government Department of Agriculture, Fisheries and Forestry, now the Federal Department of Agriculture and Water Resources.

Industry food safety schemes in Australia include:

- HACCP Australia
- Freshcare
- GlobalGAP
- supermarket quality and food safety schemes.

Landscape Construction and Design including Green infrastructure

Licensing requirements for approval of designs and specifications and landscape construction work depending on the value of the work, and certification requirements of operators using specific plant and equipment varies across state and territory jurisdictions. For example, not all green infrastructure work, construction or maintenance, will require use of high-risk work equipment (such as working at heights, using elevating work platforms or scissor lifts, or be on a construction site requiring a White Card).

As these requirements will vary nationwide, a general licensing statement was placed in the skill sets and units stating the following:

“Licensing, legislative or certification requirements may apply to the work undertaken in this [unit/skill set] in some jurisdictions. Users are advised to check with the relevant regulatory authorities.”

This statement meets the need to satisfy any possible future regulatory/licencing changes.

Grape growing legislation

The Australian viticulture sub-sector is subject to a number of federal and state/territory laws and regulations, including the *Australian Grape and Wine Authority Act 2013* (Cth.) and the *Australian Grape and Wine Authority Regulations 1981* (Cth.). These Acts provide for, among other things, the Label Integrity Program and the Register of Protected Geographical Indications and Other Terms.

¹⁵ Food Standards Australia New Zealand, 2014, 'Horticulture', viewed April 2017, <http://www.foodstandards.gov.au/code/primaryproduction/horticulture/Pages/default.aspx>

Animal reproduction

Registered Training Organisations are advised to check the legislative and regulatory requirements for units related to artificial insemination/animal reproduction. These units include statements such as the following from *AHCLSK338 Conduct dropped ovary technique procedures for spaying cattle*: “Regulatory requirements apply in some jurisdictions restricting the conduct of the DOT procedure to registered veterinarians. Users are advised to check with the relevant State or Territory regulatory authority.”

Note: A national accreditation scheme for cattle spayers is currently being finalised and will be implemented in Queensland in 2022. It is anticipated this accreditation scheme will be taken up by other states and territories once established. This accreditation scheme may impact the regulatory requirements of units related to artificial insemination/animal reproduction.

Livestock management legislation

The Department of Agriculture and Water Resources (DAWR) provides policies and legislation concerning aspects of livestock management and biosecurity, including live exports and supply of agricultural chemicals. DAWR is responsible for Australia's livestock export licences, and regularly carries out inspections to ensure that biosecurity, traceability and animal welfare requirements are being met for both export-licensing and importing countries. DAWR also manages quarantine controls at borders and provides import and export inspection and certification.

In addition, state/territory governments are responsible for livestock management, disease response and welfare arrangements within their jurisdictions, in terms of both enforcing national standards and agreements and administering state/territory legislation.

Legislation relating to livestock management includes:¹⁶

- *Agricultural and Veterinary Chemicals (Control of Use) Act 1992* (IC)
- *Agricultural and Veterinary Chemicals (Control of Use) Regulations 2007* (VIC)
- *Impounding of Livestock Act 1994* (VIC)
- *Impounding of Livestock Regulations 2008* (VIC)
- *Livestock Disease Control Act 1994* (VIC)
- *Livestock Disease Control Regulations 2006* (VIC)
- *Livestock Management Act 2010* (VIC)
- *Livestock Management Regulations 2011* (VIC).

Australian ruminant feed ban

Australia has an inclusive ban on the feeding of restricted animal material (RAM), including meat and bone meal (MBM) derived from all vertebrates including fish and birds, to all ruminant animals. An enforceable ban seeks to minimise the risk of spreading the infectious agent in mad cow disease, in the unlikely event that it is introduced to Australia. The ruminant feed ban is nationally coordinated by Animal Health Australia (AHA) and is part of a comprehensive national TSE Freedom Assurance Project. The prohibition and the program target livestock producers and other end users of manufactured stockfeed, retailers of manufactured stockfeed, and stockfeed manufacturers. Each Australian state/territory adopted the ruminant feed ban in legislation, indicating feeding prohibition and requirements for labelling and RAM content.

¹⁶ Agriculture Victoria, 2016, 'Livestock management', viewed April 2017, <http://agriculture.vic.gov.au/agriculture/farmmanagement/legal-information-for-victorian-landholders/livestock-management>

In addition, the industry implements the FeedSafe accreditation program through the Stock Feed Manufacturers' Council of Australia (SFMCA). To achieve FeedSafe accreditation, feed manufacturing sites are required to address the elements of the Code of Good Manufacturing Practice for the Feed Milling Industry, particularly methods to ensure effective cleaning, flushing and sequencing between different types of stockfeed, to minimise the possibility of cross-contamination.

Biosecurity legislation

The Department of Agriculture and Water Resources is responsible for developing and reviewing biosecurity policies for the safe importation of animals and animal products. The Department will co-administer the new *Biosecurity Act 2015* (Cth.) with the Department of Health from 16 June 2016, replacing the *Quarantine Act 1908* (Cth.).

In addition, state/territory biosecurity agencies develop policy, standards, delivery systems and services that reduce the threat of invasive plants and animals to agriculture and the natural environment; protect animals and plants from pests and diseases; enhance food safety; ensure minimal and effective chemical use; protect the welfare of animals; and preserve and expand market access for primary industries.

Live-animal export legislation

Two bills were enforced in Australia to amend the *Australian Meat and Live-stock Industry Act 1997* (Cth.) and *Export Control Act 1982* (Cth.) in response to animal welfare concerns in the live-cattle export trade.

The *Live Animal Export Prohibition (Ending Cruelty) Bill 2014* (Cth.) and the *Live Animal Export (Slaughter) Prohibition Bill 2014* (Cth.) were introduced to prohibit the export of livestock for slaughter on or after 1 July 2017, and to compel export licence holders to ensure all live stock are treated satisfactorily prior to slaughter.

Conservation legislation

Government-managed nature reserves, including marine reserves, and conservation parks are licensed and regulated by federal, state and territory environment and conservation departments under the *Environment Protection and Biodiversity Conservation Act 1999* (Cth.) (EPBC) and the *National Parks and Wildlife Act 1975* (Cth.). The EPBC Act contains an extensive regimen for the conservation of biodiversity.

Legislation relevant to agricultural chemical use

Grain trade standards and legislation

Grain Trade Australia oversees standards for wheat and coarse grain trade in the domestic and international markets.

International regulations and access to markets

To ensure access to European markets, Australian beef producers must follow a series of European Union regulations, laws and other rules governing beef cattle farming. These measures take the form of chain-of-custody certification involving cattle properties, feedlots and processors, and integrate the National Livestock Identification Scheme, which allows for the permanent identification of cattle using electronic microchips.

Industry certification programs

The industry has developed and implemented integrity systems to verify and assure food safety and other quality attributes of livestock. Examples of industry certification programs include:

- Livestock Production Assurance, an on-farm food safety certification program for cattle, sheep and goats
- National Feedlot Accreditation Scheme, which encompasses animal health and welfare, environmental conservation, food safety and product integrity
- Australian Dairy Food Safety Scheme, which monitors compliance with food standards to ensure the integrity of the dairy supply chain
- Australian Pork Industry Quality Assurance Program, which provides standards for Australian pig producers
- Egg Corp Assured, a quality assurance program administered by the National Egg Corporation
- Q-Alpaca, a quality assurance program for voluntary use by Australian alpaca breeders and owners
- B-Qual, a voluntary program for apiarists and honey-processing businesses that ensures that the honey bee industry's standards meet best practice, and domestic and international market demands.
- FeedSafe, the quality assurance program for the Australian stockfeed industry
- Freshcare, the largest on-farm HACCP assurance program.

Regulated occupations in the industry

Regulated occupations are bound by legal (or industry) requirements or restrictions to perform the work. Regulated occupations require a licence from, or registration by, a professional association or occupational licensing authority.

The industry does not have any specific trade-licensed occupations. However, it involves different professional accreditation structures overseen by industry bodies. For example, in Victoria, landscapers are required by the *Domestic Building Contracts Act 1995 (Vic)* to be registered with the state Building Practitioners Board in order to carry out large-scale structural landscaping. Qualifications include completion of Certificate III courses in landscape construction or horticulture.

Similarly, arborists do not need a licence to practise arboriculture in Australia, yet WorkCover, the Tree Contractors Association of Australia, Arboriculture Australia and the Local Government Tree Resources Association recommend that professional arborists meet several requirements. Arborists practising in Australia should represent a professional business, hold proper worker's compensation insurance, and have minimum qualifications of *Certificate II in Horticulture (Arboriculture)* for carrying out ground and climbing work, and *Certificate III in Horticulture (Arboriculture)* for supervising climbing work.

Industry codes of practice

A number of codes of practice have been developed across the industry sub-sectors to set out industry standards of conduct, including the following:

- Horticulture Code of Conduct
- Growing Australian Grain
- Mandatory Port Access Code of Conduct for Grain Export Terminals
- Food and Grocery Code of Conduct
- The Animal Welfare Codes of Practice
- Australian Animal Welfare Standards and Guidelines (for cattle and sheep)
- RSPCA Approved Farming Scheme
- Australian Wine Industry Code of Conduct
- Code of Good Manufacturing Practice for the Feed Milling Industry
- The Australian Aquaculture Code of Conduct
- Code of Practice: Amenity Tree Industry (WorkCover)
- Model Code of Practice for the Welfare of Animals – Domestic Poultry
- National Farm Biosecurity Manual – Poultry Production
- Farm Biosecurity Manual for the Duck Meat Industry
- National Standard for Organic and Bio-Dynamic Produce.

Codes of practice relevant to agriculture chemical use

Training and assessing environments

The Assessment Conditions section of the Assessment Requirements states whether assessment must take place in a real workplace or whether an environment that ‘accurately represents workplace conditions’ can be used.

An environment that accurately represents workplace conditions is one which offers real life working conditions with the actual characteristics of that working environment, including equipment, interactions with other people and completion of tasks within timeframes, if these are requirements of the working environment.

Sometimes conducting training and assessment in a real workplace is not possible or practical. If conducting training and assessment in a non-workplace environment, trainers and assessors must make sure that learners have opportunities to complete tasks:

- to the quality standards, and within the acceptable timeframes, required by the industry
- in a manner that meets the industry’s safety standards.

Training and assessment environments for Pork Sector Units.

Mandatory Workplace Requirements

Mandatory Workplace Requirements (MWR) are defined as those “assessment components that must be completed in a workplace and cannot be achieved in a simulated environment”. (Source: Mandatory Workplace Requirements: On the Mark: 5 Good Practice Principles). The following units of competency released with AHC Version 9.0 include Mandatory Workplace Requirements that state the Performance Evidence must be demonstrated in a pork production site:

- *AHCPRK202 Move and handle pigs*
- *AHCPRK311 Care for health and welfare of pigs*
- *AHCPRK312 Care for weaner pigs*
- *AHCPRK313 Treat rectal prolapse in pigs*
- *AHCPRK314 Care for grower and finisher pigs*
- *AHCPRK315 Care for sows prior, during and after farrowing*
- *AHCPRK403 Implement a feeding plan for pig production*

To alert users of MWR, the Application of these units includes the statement – “Mandatory workplace requirements apply to the assessment of this unit.”

MWR have been clearly articulated in the Performance Evidence and Assessment Conditions of each of these units of competency. The Performance Evidence states that “All performance evidence specified above must be demonstrated in a pork production site”. The Assessment Conditions state the “Assessment of the skills in the unit must take place on a pork production site”. *Italicized text* is used to clearly show the parts of Assessment Conditions that are MWR. The Assessment Conditions below for *AHCPRK202 Move and handle pigs* are shown as an example.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:
 - *live pigs specified in performance evidence*
 - *materials, resources, passageways, tools and equipment, including PPE, specified in the performance evidence*
- specifications:
 - *enterprise procedures for pig handling, movement and care, worker health and safety, and biosecurity activities specified in the performance evidence.*

Assessment Conditions

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory workplace requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.

AHC30422 Certificate III in Pork Production includes units of competency with MWR. To alert users to these units, the Packaging Rules of the qualification includes a visual indicator - a hash (#) has been inserted beside the code of any unit with MWR, and an instruction for users to refer to the individual unit of competency for further information.

AHCSS00151 Pork Industry Stockperson Skill Set includes two units with MWR. To alert users to these units, Skill Set Requirements includes a visual indicator - a hash (#) has been inserted beside the code of any unit with MWR, and an instruction for users to refer to the individual unit of competency for further information.

The Performance Evidence and Assessment Conditions (including the MWR) were developed with industry and RTO advice to allow them to be contextualised across a range of pork production sites, without compromising the skill outcomes and the biosecurity status of these sites. The Performance Evidence and Assessment Conditions can be implemented using:

- a variety of pig breeds and life stages
- breeder and/or grower farms and facilities
- indoor and outdoor production systems
- small, medium and large enterprises.

MWR are necessary because the Performance Evidence includes holistic tasks that require the application of knowledge, judgement and skills when handling and caring for live pigs according to enterprise procedures. Experience has shown employers that people trained and assessed without live animals increase both worker and pig safety and welfare risks. The work environment is highly controlled and plays a critical role in the undertaking of these tasks, and it cannot be simulated to the standard required by the industry. Biosecurity, animal welfare, worker health and safety, and public health are better protected when the Performance Evidence is undertaken on a pork production site, because pork production enterprises apply regulations, codes, procedures, equipment and other resources to control and minimise risks. These typically include controlling the movement of people, pigs, other animals, pests, vehicles, equipment, feed, water, bedding and other materials that can harbour pathogens, and isolation/removal of pathogens where appropriate.

Employers and RTOs strongly support MWR for the assessment of the Performance Evidence on pork production sites, because it:

- Ensure graduates are competent to work safely and productively with live animals in commercial production environments.
- Reduces worker health and safety, animal health and welfare and biosecurity risks, all of which are critical to the viability of the pork industry, and in turn the RTOs that service this industry.
- Reduces costs for RTOs related to the provision of animals, materials and farming infrastructure and equipment.
- Reduces RTO costs related to animal welfare compliance in jurisdictions that require Animal Ethics Committee for animal husbandry tasks, when these tasks are performed outside of a pig farm.
- Reduces productivity losses by getting production tasks completed, and preventing down time due to quarantine requirements (between 24 to 72 hours) if workers come into contact with pigs outside their own farm.

- Assists with completion of qualifications, especially as the employer is paying for the training and worker's time.

MWR does not mean that an assessor must be physically present at all times during the demonstration of the Performance Evidence. For example, RTOs and assessors can also collect 'live evidence of skills in real time' using video technology, as well as observation by third parties such as the employee's supervisor.

Australian Pork Limited (APL) is willing to facilitate introductions for RTOs to farmers that can provide access to their worksites for delivery of the revised units. APL's website has a resource library (including pig health and welfare, and a pig farming glossary) and other resources related to training and development, including accredited training.

Other pork industry advice

In response to stakeholder questions during the development of the pork sector components released with AHC Version 9.0, the following additional advice has been added to this guide.

Performance Evidence and pig requirements

The Performance Evidence in some revised AHCRK units requires care for a number of *different groups of pigs*. For example, in *AHCPRK311 Care for health and welfare of pigs*, it states that "the individual has safely and effectively cared for at least four different groups of pigs over a period of at least five days. Each group must include at least three pigs". This means that a total of at least 12 pigs are required (4 groups with 3 pigs in each group). It does not mean the 12 pigs need to be of different from each other in terms of breed, sex or life stage. For example, all 12 pigs can be weaners if that is what is available on the farm. The number of groups and group sizes are expressed as 'at least' which means the evidence can be collected with more groups and more pigs in each group if that is more convenient on the farm where the evidence is being demonstrated. The Assessment Conditions also make it clear that the "*the five days specified in the performance evidence can be consecutive or non-consecutive*", which means the evidence collection can be spread over several weeks if required.

Industry encourages using different types of pigs in the demonstration of the Performance Evidence, if different pig types (breed, sex, and life stage) are available on the pig farm where the individual is being assessed. For example, the Performance Evidence in *AHCPRK202 Move and handle pigs*, requires "the individual has safely, efficiently and calmly moved pigs from one location to another, including at least:

- four groups of pigs, with each group to include at least three pigs
- an individual pig."

While it is complaint to undertake demonstrate the Performance Evidence of *AHCPRK202* with only one type of pig, it is better to demonstrate competency in these skills with more than one type, if these are available on the farm, because pig behaviour varies across these types. The following types have been suggested by industry stakeholders as suitable for this unit:

- gilts
- sows (farrowed, gestating, oestrus)
- boars
- weaners
- growers
- finishers

Selection of electives in Certificate III in Pork Production

In response to industry feedback, the revised *AHC30422 Certificate III in Pork Production* is designed to promote the achievement of more Pork sector units (coded AHCRK), as these units provide the breadth and depth of knowledge and skills required by a piggery attendant or stock person. The Core has two AHCRK units and nine AHCRK units have been listed in **Group A - Pork Production. Elective Group B Livestock Husbandry** lists several generic livestock sector

units (coded AHCLSK) that also provide relevant knowledge and skills required by workers on some pork production sites. The Packaging Rules of this qualification require 11 elective units to be achieved, as follows

- at least 2 units must be from elective group A
- at least 5 units must be from elective group B
- the remaining units may be selected from Groups A, B or C
- 1 unit may be selected from any currently endorsed Training Package or accredited course

While it is possible to select a total of seven electives from Groups A and B, industry strongly recommends individuals select as many as possible from these two groups, as these units reflect the knowledge and skills required on pork production sites.

Training and assessment environments for Poultry Sector Units

Industry experts strongly recommend the skills in the revised Poultry sector units (released with AHC Version 9.0) be trained and assessed in a commercial poultry production site. The units were created with robust consultation with industry and RTO representatives and designed to ensure graduates are competent to work safely and productively in the commercial poultry production, noting that “Competency is the consistent application of knowledge and skill to the standard of performance required in the workplace. It embodies the ability to transfer and apply skills and knowledge to new situations and environments”. (ASQA Glossary)

The Performance Evidence in these units includes holistic tasks that require the application of knowledge and judgement when performing skills with live poultry. The work environment plays a critical role in the undertaking of these tasks. Whether the assessment environment is a commercial poultry production site or a simulated site, the resources specified in the Assessment Conditions, including live poultry are critical to demonstration of skills to the level of competency required by industry.

The revised poultry units typically cover poultry husbandry activities that are covered by animal welfare legislation, regulations and state or territory regulated codes of practice. When these units are trained on a commercial poultry production site, the animal welfare requirements are covered by the current edition of the Poultry industry code of practice which these farms are required to follow. RTOs seeking to train and assess the poultry units may approach commercial poultry producers in their area to create partnerships to train and assess workers on a farm site. Australian Eggs has links to all known Australian egg farmers and is willing to assist RTOs seeking to contact local poultry farmers.

When live animals are used in the training and assessment of these (and other livestock units) outside of a commercial primary production site, RTOs will need to consider animal welfare requirements. More information on animal welfare requirements can be obtained from state and territory animal welfare authorities.

Legal considerations for learners in the workplace/on placements

Legal requirements that apply to specific sectors covered by this Training Package vary across each state and territory and can change from time to time. Contact the relevant state or territory authorities to check. STA contact details are provided in the Links section of this Implementation Guide. The Fair Work Ombudsman has some general guidelines and fact sheets about unpaid work.¹⁷

Work placements should always involve the appropriate supervision and guidance from individuals in the workplace and trainers and assessors from the RTO and must adhere to required legislation that

¹⁷ Fair Work Ombudsman: < <http://www.fairwork.gov.au/how-we-will-help/templates-and-guides/fact-sheets/unpaid-work>>

applies in the jurisdiction e.g., learners must be supplied with the appropriate personal protective equipment (PPE) and training on how to use the PPE effectively prior to undertaking tasks that include health and safety risks.

Resources and equipment lists

RTOs must make sure that all resources and equipment required to train and assess units of competency are available. Details of specific resources, including equipment and materials essential for assessment, are listed in the Assessment Conditions sections of Assessment Requirements documents. Where units of competency require assessment in the workplace, the workplace must include the full range of equipment required to do the task, as listed in the Assessment Conditions.

Other information relevant to the implementation of the training package

Machinery operation and maintenance units

Industry has provided the following advice for RTOs that deliver AHC31021 Certificate III in Parks and Gardens with regard to machinery operation and maintenance.

The use of equipment with two stroke engines for assessment of engine oil in AHCMOM304 Operate machinery and equipment.

The Range Statement requires that engine oil must be checked as part of the pre-operational checks. While 2 stroke engines do not generally have a sump containing engine oil, the fuel mixture does contain an amount of oil required to lubricate the engine. In order to comply with the range statement, it is essential that the individual being assessed should check that the oil and fuel mixture be correct according to the ratios specified in the manufacturer manual for the equipment.

It should also be noted that if only one piece of equipment is to be used for assessment and this equipment has a 2 stroke motor, that in order to comply with the Range Statement the 2 stroke engine must be used on one of the types of machinery/equipment listed.

Machinery without an internal combustion engine for AHCMOM203 Operate basic machinery and equipment and AHCMOM304 Operate machinery and equipment assessment.

Equipment that does not use an internal combustion engine such as, power take off, pneumatic, electrical, or battery operated machinery, won't meet all of the assessment requirements for pre-operational checks listed in the Range Statement. Additional equipment will be required to address those pre-operational check items not assessed.

Note: The unit Application explicitly states that 'This unit does not apply to chainsaws, tractors, vehicles, and earth moving equipment' as these types of equipment are deemed more specialised and are addressed in specific units of competency.

Green Infrastructure

It is envisaged that units of competency *AHCGRI501 Design roof gardens*, *AHCGRI502 Design vertical walls and green facades*, *AHCGRI401 Construct roof gardens* and *AHCGRI402 Construct vertical gardens and green facades* and the related skill sets are undertaken by persons with experience in landscaping work, landscape design, horticulture and/or building and construction. Individuals must effectively communicate/consult with clients and relevant industry experts such as contractors, architects, engineers, growing media specialists and suppliers to determine such things as design and regulatory requirements for green infrastructure.

Agronomy

It is envisaged that *AHC51920 Diploma of Applied Agronomy* would be delivered either off the job or on the job with access to the types of resources, machinery and equipment that are present in the typical agronomy workplace.

Assessment requirements for Agribusiness and Business sectors

Prior to the release of AHC Version 4, the assessment requirements of several units of competency in Agribusiness sector (coded AHCAGB) and Business sector (coded AHCBUS) lacked specificity regarding the volume and frequency of performance evidence. The release of AHC Version 4 has addressed this issue, by updating and clarifying the detail in the Performance Evidence of all AHCAGB and AHCBUS units. The Performance Evidence of some revised units include details about the number of times tasks that should be performed, and other units specify the requirement to use records from a period of time, such as a financial quarter or a production period. Industry considered this to be an important part of the revised units, to ensure quality assessment outcomes specific to the work for job roles targeted at AQF levels 4, 5 and 6. Training organisations will need to ensure their assessments are updated to incorporate these requirements.

Note: Time periods specified relate to the type of work or activities that would be carried out in a business within that timeframe. They do not require the assessment to cover the actual time.

For example, the performance evidence of *AHCBUS406 Administer finance, insurance and legal requirements* requires evidence that the individual has administered the finance, insurance and legal requirements of a business covering a period of at least six months. The assessment for this unit should incorporate performance of tasks that utilise business data and activity for a six-month period. The assessment task does not need to cover six months of actual time. If this assessment is not carried out in a real workplace, the business data and activities should accurately represent real workplace data and records.

Precision Agriculture Terminology

Precision Agriculture is an emerging terminology that broadly refers to agriculture technologies, which previously had been referred to individually (i.e. use of GNSS to monitor crop, or use of laser grids to uncovers pests within crop). The use of Precision Agriculture seeks to unify technology terminology under one banner.

Sport Turf Management

It is envisaged that training and assessment of many of the Sports Turf Management units (coded AHCTRF) will occur in the workplace, as these units require access to resources, materials and equipment that are present in a typical sports turf facility. The Assessment Conditions in the Assessment Requirements for each of these units of competency specifies these requirements. Due to the variety of subsectors in the industry, an individual undertaking the *Certificate III in Sports Turf Management* will need access to a variety of sports turf surfaces.

Arboriculture

It is envisaged that training and assessment of many of the Arboriculture units (coded AHCARB) will occur in the workplace, as these units require access to resources, materials and equipment that are present in an arboriculture worksite. The Assessment Conditions in the Assessment Requirements for each of these units of competency specifies these requirements. More information is provided in the **Companion Volume User Guide: Arboriculture**.

Permaculture

Additional information with regard to the implementation of this training package has been provided in the **Companion Volume User Guide: Permaculture**.

Diploma of Pest Management

Industry has provided the following advice for RTOs that deliver the *AHC51316 Diploma of Pest Management* concerning the selection of elective units.

Imported units:

- For agency staff and contractors who carry out Biosecurity Surveillance, it is highly recommended that the RTO imports *AHCBER402 Carry out field surveillance for a specific emergency disease or plant pest* from the *AHC41716 Certificate IV in Pest Management* as part of the elective option to meet the needs of this group.
- For agency pest and weed officers who are authorised under legislation to enforce legislation such as the Biosecurity Act 2015, it is highly recommended that *AHCNRM508 Investigate suspected breaches of Natural Resource Management legislation* is imported from the *AHC51116 Diploma of Conservation and Land Management*.

It is also highly recommended that the following Group B units are selected:

- *AHCPMG413 Define the pest problem*, as defining the pest problem is core to developing a pest management plan
- *AHCCCF505 Contribute to regional planning process*, as pest managers are required to engage in regional planning processes.

AHCNRM602 Develop a monitoring, evaluation and reporting program and *AHCNRM603 Implement a monitoring, evaluation and reporting program* from Group A are not deemed by industry as essential knowledge for pest managers, and therefore other Group A units should be considered before the selection of these two units.

Aboriginal and/or Torres Strait Islander Cultural Sites Work and On Country Management

Industry has provided the following mandatory requirement for all RTOs assessing units in the Cultural Sites Work (CSW) and On Country Management (OCM) sectors:

Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:

- an Aboriginal and/or Torres Strait Islander Elder and/or Custodian
- or:
- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

This information is found in the Assessment Conditions for each unit and is additional to the requirement for assessors satisfying requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, to the additional Assessment Conditions, there are terms which have been included in some units referring to the concepts of law and lore. In Aboriginal and/or Torres Strait Islander culture, law refers to the legal systems and practices unique to Aboriginal and/or Torres Strait Islander Peoples. Lore is the passing down of knowledge and traditions, a way of life.

The word 'law' may not be as widely used across Australia in these modern times; however, it is important to remember that it is still referred to in some cultures today.

Assessing 'respect' and 'acknowledgement'

Several units in Cultural Sites Work and On Country Management include Performance Criteria where an individual is required to 'respect' or 'acknowledge'. For example, the unit *AHCOCM303 Follow Aboriginal and/or Torres Strait Islander cultural protocols*, refers to 'Acknowledge the rights of individuals' or 'Acknowledge and respect traditional knowledge' etc. Difficulties may arise when considering how these might be assessed, however, acknowledgement and respect are an integral

part of showing support for Aboriginal and/or Torres Strait Islander culture and can be demonstrated in the way an individual interacts with local Community members or Cultural Authorities. It can also be demonstrated through showing support for decisions being made by Aboriginal and/or Torres Strait Islander Peoples or groups and complying with those decisions.

Choosing electives

When choosing electives for the qualification *AHC31522 Certificate III in Aboriginal and/or Torres Strait Islander Cultural Sites Work*, consideration should be given to the selection of the following units of competency as they may be determined to be too closely related to each other if chosen together:

- AHCCSW401 Contribute to the development of cultural safety processes (Group A Cultural Sites Work) and
- CHCDIV002 Promote Aboriginal and/or Torres Strait Islander cultural safety (Group B General electives)

Training Package developer's quality assurance process for Companion Volumes

Companion Volumes are developed in consultation with industry representatives, trainers and assessors, members of Industry Reference Committees (IRCs) and their representatives. These key stakeholders provide and review content to ensure that information is relevant and useful.

The Companion Volumes undergo continuous improvement in response to feedback lodged on the Skills Impact website (<http://www.skillsimpact.com.au/contact/>).
