AHCORG408	Manage on farm composting
Application	<p>This unit of competency describes the skills and knowledge required to manage composting on farms according to recipes and in compliance with State regulations, Australian Standards, National Standard for Organic and Biodynamic Produce and agro-ecological principles.</p> <p>The unit applies to individuals who take responsibility for their own work and for the quality of the work of others within know parameters and use discretion and judgment in the selection, allocation and use of available resources.</p> <p>No licensing, legislative or certification requirements apply to this unit at the time of publication.</p>
Prerequisite Unit	Nil
Unit Sector	Organic Production (ORG)

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise for composting	1.1 Confirm composting technology, recipe and method to be used for raw material available and farm needs 1.2 Determine end product compost quality requirements 1.3 Identify composting site requirements and prepare composting area 1.4 Identify health, safety and environmental hazards, assess risk and implement controls 1.5 Select, check serviceability and prepare materials, equipment and machinery for safe operation 1.6 Comply with enterprise work health and safety guidelines
2. Prepare raw materials and compost on farm	2.1 Select, check and use personal protective equipment (PPE) 2.2 Identify and collected raw materials and additives for composting according to recipe and quality standards 2.3 Pre-process raw materials into suitable forms for composting according to recipe 2.4 Mix raw materials into suitable compost mixtures for composting according to recipes 2.5 Handle feedstock materials according composting method, available equipment 2.6 Maintain records for tracking batch according to workplace procedures
3. Manage and monitor the composting process	3.1 Manage compost batches according to composting methods 3.2 Use field testing procedures to monitor composting progress 3.3 Maintain records for process control indicators 3.4 Identify substandard composting indicators and rectify according to production process 3.5 Follow site biosecurity and hygiene according to workplace procedures
4. Inspect compost quality and maintain site	4.1 Inspect and assess finished compost to determine if quality indicators have been met 4.2 Implement biosecurity procedures for machinery and processing equipment between batches 4.3 Store raw materials and finished compost products according to workplace procedures

Foundation Skills	
<i>This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.</i>	
Skill	Description
Numeracy	<ul style="list-style-type: none"> Calculations are performed to a high degree of accuracy to ensure quality and repetition of compost recipe and outcomes

TITLE	Assessment requirements for AHCORG408 Manage on farm composting
Performance Evidence	
<p>An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.</p> <p>There must be evidence that the individual has on at least one occasion manage the production of compost on a farm:</p> <ul style="list-style-type: none"> • implemented and managed an on farm compost system • managed composting processes • managed a composting site • evaluated compost quality and implemented remedial actions where key indicators were lacking • implemented enterprise work health and safety policies • followed site biosecurity protocols. 	
Knowledge Evidence	
<p>An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:</p> <ul style="list-style-type: none"> • basic principles of composting, including: <ul style="list-style-type: none"> • different methods of composting • characteristics of raw materials used in compost • fundamental characteristics of compost quality • compost quality standards • steps in pre-processing compost materials • batch documentation techniques • site and equipment requirements for on farm composting • key process control stages critical to consistent compost production • overview of systems and technologies used in compost production • characteristics and categories of a range of compost products. • relevant environmental, health and safety legislation and regulations • record keeping requirements • site biosecurity protocols • agro-ecological principles • principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce if applicable. 	
Assessment Conditions	
<p>Assessment of the skills in this unit of competency must take place under the following conditions:</p> <ul style="list-style-type: none"> • physical conditions: <ul style="list-style-type: none"> • skills must be demonstrated on farm or an environment that accurately represents workplace conditions • resources, equipment and materials: <ul style="list-style-type: none"> • use of tools and equipment • use of compost components and materials • use of personal protective equipment • specifications: <ul style="list-style-type: none"> • use of workplace policies, procedures, processes • use of manufacturer operating instructions for equipment and machinery • access to safety data sheets • use of workplace compost methods, recipes and specifications • access to specific legislation and codes of practice. <p>Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.</p>
