## Modification history

Comments		
This version released with FWP Forest and Wood Products Training Package Version 8.0.		
Apply principles of pneumatics and hydraulics to analyse potential equipment failures		
<ul> <li>This unit of competency describes the skills and knowledge required to apply the basic principles and applications of hydraulic and pneumatic systems and components of forest and wood products equipment to analyse potential pneumatic and/or hydraulic failures for supporting maintenance processes.</li> <li>The unit applies to supervisors and technical experts who are responsible for the operation of saw shops, production lines and other forestry equipment and are required to have a working understanding of hydraulic and pneumatic principles and contribute to the identification of plant and equipment failures in order to communicate effectively with maintenance and engineering teams.</li> <li>No licensing, legislative or certification requirements apply to this unit at the time of publication.</li> </ul>		
Common Technical (COT)		
Performance Criteria		

Elements	Performance Criteria
Elements describe the	Performance criteria describe the performance needed to demonstrate
essential outcomes.	achievement of the element.
1. Identify basic principles and applications of	1.1 Identify purpose and advantages of pneumatic power transmission over mechanical and hydraulic power transmission
pneumatic power	<ul><li>1.2 Review key terminology and concepts used in pneumatic systems</li><li>1.3 Identify applications of pneumatic power in forest or wood products equipment</li></ul>
	1.4 Use simple system diagram to identify components, including mechanical, electrical and electronic components, and operation of
	pneumatic power system relevant to forest or wood products equipment 1.5 Determine risk of pressure in pneumatic power systems and preventative actions
	1.6 Identify potential personal injury hazards associated with pneumatic power systems and appropriate prevention or mitigation measures
2. Identify basic principles and applications of	2.1 Identify purpose and advantages of hydraulic power transmission over mechanical and pneumatic power transmission
hydraulic power	<ul><li>2.2 Review key terminology and concepts used in hydraulic systems</li><li>2.3 Distinguish between atmospheric gauge and absolute pressures and their use in hydraulic systems</li></ul>
	2.4 Identify applications of hydraulic power in forest or wood products equipment
	2.5 Use simple system diagram to identify components, including mechanical, electrical and electronic components, and operation of
	hydraulic power system relevant to forest or wood products equipment 2.6 Determine risk of pressure in hydraulic power systems and preventative actions
	2.7 Identify potential personal injury hazards associated with hydraulic power systems and appropriate prevention or mitigation measures

FWPCOT4XXX Apply principles of pneumatics and hydraulics to analyse potential equipment failures

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3. Analyse potential pneumatic and/or hydraulic	3.1 Identify hydraulic and/or pneumatic system components of site equipment and determine their function(s)
failures of forest or wood products equipment	<ul><li>3.2 Read maintenance records and analyse mean time between equipment failures or malfunctions related to hydraulic and/or pneumatic components</li><li>3.3 Read and analyse pneumatic and/or hydraulic performance data of site equipment</li></ul>
	3.4 Identify potential failures and/or faults for each hydraulic and/or pneumatic component of site equipment that may affect proper functioning of site equipment
	3.5 Identify root causes for potential failures and/or faults of hydraulic and/or pneumatic components
	3.6 Determine effects associated with each potential failures and/or faults on site equipment if they occur
	3.7 Assess likelihood of occurrence and potential severity, including ease of detection, of potential failures and/or faults and determine a relative failure risk rating
	3.8 Select and recommend preventive pneumatic and/or hydraulic maintenance processes to reduce the risk of equipment failures or malfunctions

Foundation Skills		
	language, literacy, numeracy and employment skills that are essential for mpetency but are not explicit in the performance criteria.	
Skill	Description	
Reading	<ul> <li>Read basic technical references relevant to hydraulic and pneumatic systems and components</li> </ul>	
Oral Communication	<ul> <li>Use appropriate vocabulary including technical language to describe hydraulic and pneumatic systems and components</li> </ul>	
Numeracy	Interpret numeric and graphical information relevant to the operation of hydraulic and pneumatic systems and components	

Unit Mapping Information

TITLE	Assessment requirements for FWPCOT4XXX Apply principles of pneumatics and hydraulics to analyse potential equipment failures
Performance Ev	vidence
An individual demon unit.	nstrating competency must satisfy all of the elements and performance criteria in this
There must be evide of:	ence that the individual has used a simple system diagram to describe the operation
• one pneumatic s	system of an item of equipment used in forest or wood products operations
<ul> <li>one hydraulic sy</li> </ul>	ystem of an item of equipment used in forest or wood products operations.
There must also be	evidence that the individual has:
	c failure modes, effects and root causes analysis on hydraulic or pneumatic
·	an item of equipment used in forest or wood products operations
•	commendation for reducing the risk of equipment failure or malfunction as part of
preventative ma	intenance.
	4
Knowledge Evic	Jence
	be able to demonstrate the knowledge required to perform the tasks outlined in the mance criteria of this unit. This includes basic knowledge of:
products equipm	ology and key concepts of pneumatic power systems in worksite forest or wood nent, machines or plant:
	d advantages of pneumatic power transmission
orifice flow,	used in pneumatic power systems (prime movers: linear, rotary, radial; pressure, flow force, torque, holding pressure, load, lift, stroke)
<ul> <li>atmospheric</li> </ul>	c, gauge and absolute pressure
• vacuum	
	v application to pneumatic power transmission
	r pressure, force
• measureme	
	er system operation in worksite forest or wood products equipment, machines or plant
<ul> <li>purpose of c</li> <li>types of gas</li> </ul>	components, including mechanical, electrical and electronic components
<ul> <li>contamination</li> </ul>	
<ul> <li>precision co</li> </ul>	
•	response rate
-	e characteristics
-	etween air production and air consuming systems
	sure in hydraulic power systems (actuator stopped or stalled, stored energy)

- hazards (crushing and pinch points, sudden shoot out, presence of carbon monoxide in system, exposure to compressed air, split tube or pipe)
- frequent malfunctions during operations
- purpose, terminology and key concepts of hydraulic power systems in worksite forest or wood products equipment, machines or plant:
- purpose and advantages of hydraulic power transmission
- terminology used in hydraulic power systems pressure, flow, force, torque, holding pressure, linear movement, rotary movement, load, lift.
- atmospheric, gauge, and absolute pressure
- Pascal's law application to hydraulic power transmission
- formulae pressure, force
- measurement units
- hydraulic power system operation in worksite forest or wood products equipment, machines or plant:
  - purpose and function of components, including mechanical, electrical and electronic components
  - types of fluids

٠

- contamination
- pressure and flow control

## Knowledge Evidence

- performance characteristics
- components reservoir, gauge, filter, control valves, pressure relief valves, pump, actuator, regulator
- risks of pressure in hydraulic power systems pump running, pump stopped, stored energy hazards – crushing and pinch points, burns from hot oil at high pressure, fire from oil leaks, flailing hydraulic lines, injection of oil into the skin, oil leaks on floor, skin exposure to oil
- frequent malfunctions during operations pressure fluctuation, fluid leakage and excessive temperature, overheating, excessive noise, insufficient power
- techniques for determining mean time between failures (MTBF)
- techniques for undertaking failure modes, effects and root causes analysis on hydraulic and pneumatic components of worksite forest or wood products equipment, machines or plant.

## **Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - basic technical references relevant to hydraulic and pneumatic systems and components
- specifications:
  - workplace procedures and manufacturer specifications relevant to hydraulic and pneumatic power systems and components in forest and wood products equipment, machines and plant.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
